Cloud Security Envisioning Engagement

Put next-generation Microsoft security tools to work for you.

Engagement Highlights

- Uncover **vulnerabilities and misconfigurations** across all your cloud environments
- **Experience Microsoft Defender for Cloud** in action, using your real production data
- **Collaborate with security experts** to define your future security state
- **Walk away with a roadmap** tailored to your goals, risks, and business case

You need confidence that your cloud workloads are secure, compliant, and resilient.

The **Cloud Security Envisioning** engagement gives you the clarity to see where you stand today and what steps to take next. Using real data from your production environment, Microsoft Defender for Cloud, and TierPoint's expertise, you'll uncover risks, explore security possibilities, and shape a strategy that aligns with your business goals.

As your cloud footprint expands, so do the risks – identities, data, applications, devices, and infrastructure become more complex across all your cloud environments. This workshop helps you discover vulnerabilities and misconfigurations that could put your organization at risk, while showing you the options and best practices to address them.

With TierPoint at your side, you gain more than visibility, you gain a partner committed to helping you act on it. Our certified security professionals will guide you through the process, delivering actionable insights, a roadmap for improvement, and the confidence to secure executive buy-in for your future cloud security strategy.

Why you should attend

With the growing complexity of identities, data, applications, devices, and infrastructure, it's critical for you to understand exactly how secure your organization is today—and what needs to change to stay protected. By participating in this workshop, you will:

- **Discover real risks in your environment** using live data from your production workloads
- **See your security posture clearly** across all your cloud environments
- **Explore your options** for strengthening defenses with Microsoft Defender for Cloud
- **Leave with a plan** that drives executive buy-in and actionable next steps

What to expect:

During this engagement, we'll partner with you to strengthen your organization's approach to cybersecurity. We'll help you better understand how to prioritize and mitigate potential attacks, with:

- Analyze threats targeting your organization
- Gain visibility into vulnerabilities across Azure and your other cloud environments
- Experience real-time detection and incident response scenarios
- Receive actionable recommendations and a roadmap to improve security
- Modular approach, allowing you to **select three (3) out of seven (7)** available modules aligned to your needs and requirements:

Selectable Module	Selectable Module	Selectable Module	Selectable Module	Selectable Module	Selectable Module	Selectable Module
Defender for Servers	Defender for Databases	Defender for Storage	Defender for Containers	Defender for App service	Defender for AI Services	Security Exposure Management

Who should attend

The engagement is intended for security decision-makers such as:

- Chief Information Security Officer (CISO)
- Chief Information Officer (CIO)
- Chief Security Officer (CSO)
- IT Security Architects
- IT Security Administrators
- IT Security Operations (Sec Ops)

Why TierPoint?

When you work with TierPoint, you don't just see possibilities, you make them real. Our certified security experts help you turn Microsoft Defender for Cloud into a powerful foundation for protecting your business. With 24/7 U.S.-based security services, hybrid cloud expertise, and managed IT support, we are your trusted partner beyond the workshop.
