

Security Posture Assessment

Knowledge is power – Understand your security gaps, accelerate security improvements, and mitigate risk.

In this age of digital transformation and rapid cloud adoption your organisation faces a myriad of security and compliance risks.

Your security infrastructure is increasingly complex with inefficient processes and expensive solutions. Plus, your team is maxed, fighting fires, and pulled from pillar to post.

Take control over your security strategy - identify and fix your biggest security gaps at speed, create a roadmap for security investments and prove ROI to the Board.

It all starts with a security posture assessment.

37% of proposed security investments are rejected because of failure to articulate risk and prove ROI.

(October 2020)

Your security challenges are complex

We recognise that CISOs and security leaders have a difficult task protecting organisations.

You have to contend with a number of challenges:

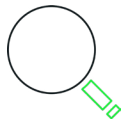

- **Complexity** - Disparate solutions have created a fragmented infrastructure and tied your team up in administration knots.
- **Visibility** - Your systems don't talk to each other, you've got too many blind spots – you simply don't know where to start!
- **Capacity** - A cyber skills shortage has amplified recruitment costs – and you've got to try and retain them once the pressure ramps up.
- **Communication** - Key stakeholders don't support you because they don't understand the true impact of your security challenges.
- **Threat knowledge** - Your team can't keep up with BAU – getting ahead of the hackers and an ever-changing threat landscape feels hopeless.
- **Compliance** - You need to provide assurance – managing IT governance and regulatory compliance on top of everything else.

Your security performance made crystal clear

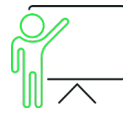

A Kocho Security Posture Assessment is delivered by highly experienced, Microsoft Accredited Consultants.

How it works:

Discovery session

We'll interview and survey your key stakeholders, and carry out a detailed assessment of your Microsoft cloud tenant, utilising the MITRE ATT&CK framework.

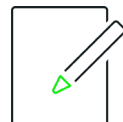

Playback session

An interactive session with our security experts. We'll present the findings from your assessment, you'll have the opportunity to ask questions, and we'll help you identify where investments will have the most impact.

Security dashboard creation

Built using Power BI, your tailored security dashboard will provide crystal clear visibility of your current security posture – including your shadow IT risk and threat exposure from compromised credentials.

Report and action plan

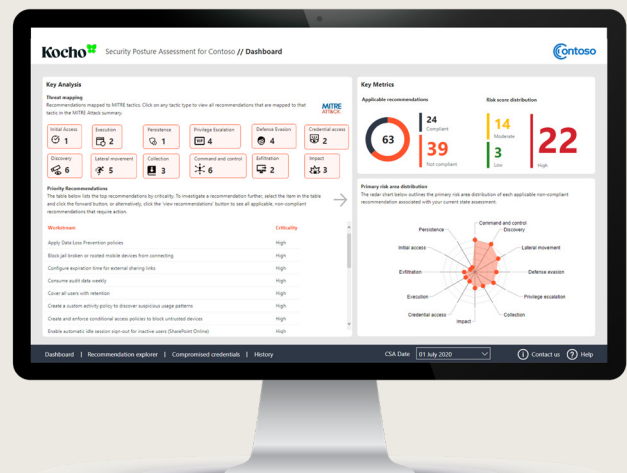

You'll receive a security report which details your security gaps, remediation priorities, and recommendations for a security improvement roadmap. The report also helps you to articulate security gaps and required improvements at board level.

Your security dashboard

Cut through the complexity of security and compliance – and communicate to the Board in a way they'll understand.

Your security dashboard will help you:

- Identify your key threats based on whether they score high, moderate, or low risk
- Access the most suitable remediation tactics from the MITRE ATT&CK knowledge base
- Prioritise critical actions – with recommendations and supporting information

Workshop deliverables:

The foundation of cyber security is to quickly and accurately identify authorised users and give them proper access to the information and tools they need to do their job.

Our goal is to provide you with tools to protect your authorised users' identities, so you can authenticate credentials and manage file access, while still giving users the freedom to collaborate with others.

Report and action plan

You'll receive a security report which details your security gaps, remediation priorities, and recommendations for a security improvement roadmap. The report also helps you to articulate security gaps and required improvements at board level.

Business support

Easily articulate security risks with a powerful visual representation of your organisation's security posture.

Reduced risk

Quickly identify and prioritise your biggest threats – with clear recommendations to fix them fast!

Measurable returns

You can track improvements to your security posture over time. Take pride as your security scores improve!

Confidence and assurance

Validate your security performance with a leading Microsoft Security Partner, and track improvements over time.

Lower costs

Stop wasting money! You'll have the insights you need to make informed security investment decisions.

Measure your security posture uplift over time

If you so choose, the Security Posture Assessment is repeatable, enabling us to monitor and partner with you to measure your security improvements over time.
