

Metadata Extractor – Power BI

Capabilities

1. **Impact Analyzer** – It helps to find the Power BI datasets and reports which will be impacted if there is a change in the underlying data source.
2. **Model Documenter** – Understand what tables, columns, measures and relationships exist in your Power BI model. Also act as a data catalog for organization to find which datasets are already available before start new.
3. **Optimize Helper** – Provide recommendations to help you to optimize the Power BI model

Benefits

- Document your Power BI datasets easily.
- Considerable saving in analysis effort.
- Speed up the migration and impact analysis.
- Optimize the Power BI datasets with standards and best practices
- Reduce the data redundancy and help the vision on single version of truth which helps to optimize the Power BI premium capacity usage.

Considerations

- It works only for Power BI Premium and Premium Per User Workspaces.
- Provide the list of workspaces – Need workspace admin access
