

T2M Voice

Voice communications are often an overlooked, yet mission critical business technology. Person to person speech builds relationships. Companies in multi-site retail, distributed financial, and mortgage lending are extremely dependent on reliable, cost-effective voice services. T2M Voice is the modern, purpose-built VoIP platform from T2M that addresses those voice requirements. Cloud-based T2M Voice delivers a powerful, value priced, voice first solution to the marketplace.

Sometimes you just need Voice.

Overview

- Reliable** T2M Voice delivers a rich, enterprise class feature set with 99.999% reliability. Studio HD sound quality, unlimited domestic calling, and usage based international calling are standard.
- Cloud Based** The geo-redundant cloud hosted platform with multi-carrier connectivity is architected to deliver resilient calling operations. The high availability vSBC routing engine supports the most advanced calling requirements with ease.
- Fully Managed** Voice is provided as a fully managed service. Plans include an intuitive administration portal and 24/7 U.S. based help desk. CDR analysis, advanced reporting, and quality of experience monitoring are readily available.
- Cost Effective** Delivered via a low cost, SaaS telephony model, T2M Voice offers aggressive pricing. Voice also provides broad compatibility with existing SIP end-points so you don't have to purchase new phones.
- Rapid Rollouts** T2M Voice is built to scale across thousands of sites and enable rapid deployment. Multi-site, same day rollouts include scripted automations, expert provisioning and porting event management. Integration with other call control platforms such as Microsoft Teams is seamless.
- Flexible** Voice offers the capability to support multiple use case requirements including analog devices, common area phones, legacy paging systems, alarms, night-bells, and shared line appearance.
