

Charity Accelerator

Created using Microsoft Dynamics 365 Business Central, Tisski's Charity Accelerator solution provides the perfect platform for not-for-profit organisations, allowing them to keep track of their incomings and outgoings, and manage expenditure in a manner that's compliant with existing regulations.

Introducing Charity Accounts to your organisation will enable you to:

- Track and manage donations effectively;
- gain top-level insight from dedicated dashboards;
- ensure revenue from designated funds is allocated correct;
- identify donations covered by Gift Aid and export to the HMRC template;
- and report on statutory accounts.

Supported by the Essential and Premium versions of Business Central, this solution is easy to adopt and available to demo on Microsoft AppSource, enabling you to see the benefits the solution can bring to your organisation pre-adoption.

Key Benefits

Track expenditure with ease

Through automated journals, you can track and effectively manage revenue, ensuring that money is taken out of its relevant fund and your revenue stream is credited appropriately.

Ensure compliance with reporting regulations

Reduce the manual work required to collate information for reporting purposes via a visual dashboard, saving time and resource when you need to submit your financial statements along with details on restricted funds.

Streamline the Gift Aid process

By running reports through Business Central, you can speed up the annual process of claiming Gift Aid from the Inland Revenue, saving time spent calculating claimable Gift Aid and funds received from sponsored events and combined donations.
