- DevSecOps & CICD Pipeline using Azure & GitHub
- Cloud-Native & Modern App Development

Cloud Native Journey

We Accelerate your Cloud Native and Data Platform Journey

Fast forward to operating a system that captures customers behaviour and your teams can rapidly deliver innovative digital products and services to meet their needs. That is Cloud Native, fail-fast and evolving your business with high velocity and intelligent automation on the cloud.

Service Areas

- Cloud-Native Advisory and Architecture
- Cloud-Native Implementation
- Cloud Platform Engineering
- Kubernetes Advisory and Implementation
- DevSecOps & CI/CD Pipeline using Azure & GitHub
- Cloud-Native & Modern App Development

FAST FORWARD YOUR LEGACY

We help you build better software

- Accelerate app development process
- Meet business and end-user needs for critical applications
- Modernize cloud native development practices
- Build flexible applications by leveraging microservices and APIs

We help transform IT operations

- Design a Kubernetes ready infrastructure
- Install, integrate, and configure for cloud-native apps
- Define policy and automate existing IT processes
- Deliver a developer ready platform to streamline apps in production

REDUCED OPEX

Offers more value than staff augmentation models

AUTOMATION EXPERTS

Automate your software delivery lifecycle using CI/CD tools and Infrastructure as code practices

SCALABLE ON DEMAND MODEL

Flexible on demand resourcing model to support growing business needs

CERTIFIED ENGINEERS

Highly qualified experienced engineers in Azure Kubernetes and Cloud platforms

Azure Kubernetes Service (AKS)

Microsoft Azure Kubernetes Service® Bundles

Activation

- Discovery & analysis of technology landscape
- High level architecture of AKS clusters
- Infrastructure as code provisioning of the AKS clusters
- Migration of one application as an MVP
- Setup basic monitoring for AKS using azure monitor

4 Weeks

Operationalisation

- Design & build an AKS Security model using Azure Policy
- Design & build a consumption model for AKS services for self-service config-as-code pipelines
- Setup monitoring & observability for Kubernetes environments
- Implementation of an automated release management workflow in compliance with organisation's change management where applicable

8 Weeks

Modern Applications

- Discovery & analysis of the application architecture
- Design of the application in the Kubernetes environment
- Build of the application workloads
- Build of CI/CD pipelines for the application
- Deployment of the application in a nonprod environment

8 Weeks

TL Consulting Accelerated Onboarding

Application Modernization | Secure Software Pipelines | Platform Development
