

Make data quality the cornerstone of your data-driven business strategy

Data Quality Studio

On Microsoft Dynamics 365 for Finance and Supply Chain Management
And Microsoft Dataverse

Data Quality Studio (DQS) ensures uniform, manageable, accurate, consistent, and accountable data. It can:

- ✓ Ensure data governance within Dynamics 365 F&SCM and Dataverse
- ✓ Configure your (master) data validation rules without development efforts for any data in Dynamics 365 F&SCM and Dataverse
- ✓ Guide users performing data entry by providing real-time checks for valid input according to your business requirements
- ✓ Make sure consistent and reliable data is created for all stakeholders for improved operational effectiveness and customer satisfaction
- ✓ Ensure fast and consistent data entry through smart data enrichment rules
- ✓ Optimize operational efficiency and reporting with the help of duplicate data detection and prevention

Benefits of Data Quality Studio

Get reliable business reporting with high-quality master data and transactional data through reduced data entry errors

Improve operational productivity by eliminating poor data quality across departments, companies, and application landscapes

Ensure data compliance by providing access to operational data that is sufficiently complete, valid, accurate, and granular

Eliminate duplicate data by automating the process. Automation saves costs and enables standardization across multiple sources to create a single source of truth

Enhance business value by setting up validations using own or third-party web services

Offer support for versioning in data quality policies to plan for changes when required

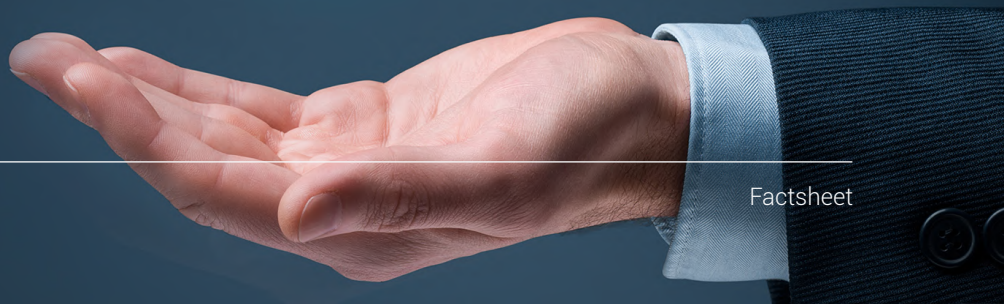

Configure, test, and execute validation rules within minutes

Save on development and update costs

Guarantee the integrity of data, whether historical or entered in real-time

Key Features

Data Quality Policies

Set up additional validation or enrichment rules at the field or record level to ensure employees enter the correct values. These rules can be set conditionally for specific legal entities or based on the value/content in fields or tables.

Data Patterns

Set up your data patterns in the data validation rules to enforce correct formatting of the data entered.

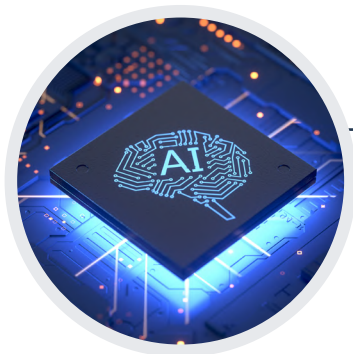

Web Services

Create integrations with your own or third-party web services to check for valid data or data enrichment.

User Interaction

Monitor data entry by users according to the data quality policies. In case of an error, the users get a clear message and can focus on correcting the error.

AI-Powered Duplicate Detection

Establish duplicate detection rules that provide automated suggestions for the most suitable AI algorithm, tailored to the selected duplicate detection scenario.

More Features

Data cleansing and enrichment

Set up data actions which allow you to autocomplete fields with certain values. They can be set up as conditional, so the values can be different according to your business requirements.

User Interaction

Monitor data entry by users according to the data quality policies. In case of an error, the users get a clear message and can focus on correcting the error.

Quality Assessment

Set up periodic quality assessments to see if there are existing records in the application that do not meet the validation rules. This can be used to comply with a new or changed setup or when the cleansing and validation rules are not directly enforced during data entry.

Data Quality Studio Freemium

Offered as a free solution on Dataverse, Data Quality Studio powered by AI Freemium uses AI algorithms to help you detect duplicate data in the system and enable the merging of two duplicate records to achieve a single source of truth.

Want to get **qualified data** by configuring validation and business rules?

TO INCREASE

We are driven by our vision of empowering you, our customer, with software solutions that help you optimize your operations, grow, and lead in your sector. Our team of passionate technology experts works at anticipating potential problems our customers may face and provide easy-to-implement and use solutions that help them stay ahead of the competition.
