Integrations Built Around Choice

Delivering a fully-integrated technology stack for your organization is crucial to ensuring success across your supply chain planning solution. With ToolsGroup, you get an industry-leading solution backed by unmatched integration capabilities, all designed to meet your organization's unique needs.

ToolsGroup's integration options are designed to be flexible and easy to implement. From disparate ERP systems to data lakes to the management of data pipelines, ToolsGroup's focus is ensuring data flows seamlessly across your organization.

Choose Your Own Integration Journey

Select An Integration Point

There are a variety of options for how to prepare your data for integration. With ToolsGroup, you have the flexibility to choose the best starting point for your organization:

ERP: Bring ToolsGroup in from the beginning. Extract, transform, and load data using built-in connectors or an integration partner

Data Repository: You extract the data into a data lake, folder, or database, and ToolsGroup takes it from there

Self-Managed: You handle data extraction and transformation in-house, and ToolsGroup comes in when you're ready to load the data

Data Transfer Options

Based on your integration point, ToolsGroup offers four out-of-the-box data transfer options, ranging in complexity to meet your specific needs:

✅ **Flat File/** Easy data transfer across a series of files

✅ **Database-to-Database/** Direct data transfer from one database to another

✅ **APIs/** Standard APIs that can be consumed to support data exchange automation and your business

✅ **Standard Connectors/** (for ERP integration points only) Utilize pre-built linkages between platforms and systems to ensure a complete, intuitive data transfer

Designed To Meet Your Security Requirements

No matter the integration method chosen, ToolsGroup ensures your privacy requirements are met. That means delivering infrastructure that allows you to control who touches the data, where they touch it, and how. Whether you want an automated solution or more intervention, our technology can meet your needs.

Scaling Levels of Support

Whether through our in-house teams or approved integration partners, you'll have a guiding hand every step of the way to meet your specific integration requirements.

Technology Partners

ToolsGroup's flexible technology partner solutions complement your ToolsGroup digital supply chain planning software and offer seamless connectivity.

Dynamics 365

Microsoft Dynamics
Bring SO99+ into the Microsoft Power Platform, enriching Dynamics SCP capabilities with "near real-time" updates that are fully configurable using Microsoft tools.

planalytics®

Planalytics
Weather can be a huge factor when it comes to ensuring effective retail supply chain planning. With our Planalytics module, you can better isolate, measure, and manage the effect of weather changes on your business, all within your ToolsGroup software solution.
