Microsoft Power Platform – Governance Framework

Implement a set of 'digital guard rails' that give users access to the right tools.

While most organisations want to proactively drive innovation and improvement and bring together like-minded people with similar goals to share knowledge and success – it is important that this innovation and creativity does not create additional unacceptable risk. Giving end-users unchecked access to powerful tooling and organisational data significantly increases the risk of accidental and malicious data loss and data corruption by both internal and external factors. In addition, unchecked use of tooling can increase the total cost of ownership for the shared services and quickly exhaust limited shared system resources that are required for critical systems.

To avoid these risks, organisations need to proactively manage user access and expectations, and ensure the right management, monitoring and tooling is in place from day one.

You will work with our certified delivery team to define and implement appropriate governance frameworks and tooling to control how users (especially community developers and app makers) use and share data and tools across your technology estate.

The framework will consider platform governance capabilities at both the tenant level and environment level, which may include the adoption of Microsoft Power Platform Center of Excellence Starter Kit capabilities.

While governance is often focused on security, we will also work with you on an internal communication plan, and new-maker recruitment and training process to ensure innovative users have a way to request access to and participate in the programme – using the 'Nurture' templates available from Microsoft.

Finally, we will ensure that appropriate administrators and managers have access to reporting, so that platform performance, adoption and user behaviours can be quickly and easily reviewed as part of ongoing governance.

So, what is the benefit?

- Reduce the risk of accidental and malicious data loss and data corruption by both internal and external factors.

- Reduce the risk of over-spending / over-consumption by individual users – which unchecked, could lead to platform throttling / service disruption.

- Establish a positive, predictable user experience for new makers through an onboarding and nurture programme.

- Give managers a set of reports on their teams' use of the platform.

- Give administrators access to a set of performance and resource consumption reports.

Time frame
A 25-day engagement

Cost
From £25K

Deliverables can include:

- Tenant and environment level setup and configuration to ensure that organisational data and services availability is managed appropriately.
- Installation and setup of the appropriate CoE Starter Kit components to support the agreed governance strategy.
- Define, design, build, and deploy a new-maker recruitment and training programme.
- Platform performance, adoption, and user behaviour dashboarding.

Contact our team to find out more about how you can increase adoption and improve ROI, without increasing risks.

Microsoft Power Platform is the glue that ties your business together, giving you the power and ROI to innovate in a secure and effortless way. You can generate low-code solutions at an enterprise scale faster, and at a lower cost. It's time to transform, enhance your productivity and concentrate more on the growth and value of your business.
