Microsoft Power Platform – Proof of Concept

See the potential of the Microsoft Power Platform brought to life

Successful businesses don't stand still. They are always striving to improve productivity and remove inefficiencies across all functions. Microsoft Power Platform can help minimise the risk of human error and through automation, address and solve various businesses challenges as well as enhance your business processes.

Whether you are looking to automate repetitive tasks to free up your team so they can focus on business-critical goals, accelerate decision-making thanks to enhanced data visualisation capabilities, or have any other pressing challenges, the Proof-of-Concept offer demonstrate the capabilities of the Power Platform.

We will help you pinpoint priority concerns by defining the needs of key stakeholders, followed by the building of a POC solution that will evidence how the Power Platform can solve key business challenges.

Xpedition will rapidly design and deliver a proof-of-concept solution to help your organisation realise the true potential of Microsoft Power Platform.

Whilst the target of the test scenario will vary from organisation to organisation, this engagement is designed to rapidly deliver a solution that provides evidence as to

the Power Platforms ability to solve for specific business challenges and technical requirements in a test scenario.

Seeing a proof-of-concept brought to life is a low-risk way of seeing the Power Platform brought to life, enabling your organisation and senior leadership to better understand the range of possibilities the Power Platform enables.

Learnings from this exercise can then be used to scope a more complete solution in a platform adoption project.

So what will I get?

While the target of the test scenario can vary from organisation to organisation, a POC will usually include application interface, process automation, and reporting.

This engagement is designed to rapidly deliver a solution that provides evidence as to the platforms ability to meet specific business and technical requirements for the test scenario. Learnings from this exercise can be used to scope a more complete solution in a platform adoption project.

Customers will benefit from:

A proof-of-concept for a target set of users focused on the priority business scenario.

A clearer understanding how the solution will co-exist with the rest of the existing platform technologies.

Greater clarity on possible client licenses and product subscriptions.

Upskilling and knowledge improvement of the internal project team through their involvement in this rapid adoption project, helping position them as internal champions for any wider roll-out.

Time frame

A 20-day engagement

Deliverables can include:

- A defined pilot scenario that identifies key stakeholders, sponsors and timelines and business challenge(s)
- A demonstration of an operational system in a trial environment that showcases platform's ability to achieve agreed outcomes
- Key recommendations for next steps including the option to deploy the pilot workload to a production environment
- Lessons learned and opportunities for improvement – if any

Cost

From £20K

Realise the power of Microsoft technology with a Proof-of-Concept engagement – speak to one of our Power Platform experts today.
