Enterprise Mobility + Security Suite

As an IT leader, you are challenged to efficiently manage the ever-changing demands on your Cloud environment. We understand the issues and the complexity associated with securing and governing your Cloud environments and have a plan to help. The Enterprise Security + Mobility program will identify your existing entitlements and provide deployment assistance and recommendations across all the major attack vectors, and for each of the security features brought to bear in the EMS suite.

TRACE3 ENTERPRISE MOBILITY + SECURITY PROGRAM OFFERING

The four pillars of the program ensure the fundamental foundations of your Cloud environment are designed to support security from the attack vectors of identity, applications, data, infrastructure, and devices.

STRATEGIC ROADMAP & RECOMMENDATIONS

The Trace3 powered EMS E5 Program will derive a strategic set of recommendations and a curated deployment path to cater to your environment's variables and configuration. The program will identify and discover areas of enhancement to align to Microsoft best practices and industry standards. Through a comprehensive review and assessment of your environment, Trace3 will work with you to develop custom objectives focused on your unique risk thresholds. As a part of this program, we will identify overlapping products that compete with the Microsoft EMS suite and give recommendations of either replace, augment, or integrate with your existing solutions.

CENTRALIZED SECURITY

The EMS E5 program aims to take advantage of the numerous features within the EMS E5 security suite and provides centralized administration, dashboarding, and investigation. By centralizing security across Azure Identity, SaaS applications, Corporate Data, and Employee Devices, you will reduce gaps and technology sprawl across your environment.

GOVERNANCE

It can be difficult to align your cloud environment to meet compliance and regulatory frameworks. We assist by cross-walking EMS controls across industry compliance frameworks. We also put into place processes and workflows to make sure governance translates across your identities, devices, data, applications, and infrastructure.

TACTICAL ENABLEMENT & PROGRAM MANAGEMENT

The program is both consultative and tactical. Trace3 will provide a team consisting of engineers, architects, project managers, and program managers to facilitate design, co-ordination, alignment with stakeholders ,and ultimately deliver configured and documented environments. The program focuses on operationalizing security within the enterprise, using crawl/walk/run tactics measuring feature impact to the userbase and implementation complexity.

INCREASE YOUR CLOUD SECURITY ACROSS FIVE PRACTICE AREAS

IDENTITY
Secure identities at the edge of your perimeter with technologies such as Azure AD, MFA, Defender for Identity, Identity Protection, Conditional Access, and Privileged Identity Management.

DEVICES
Secure both company-issued and BYOD devices using Microsoft Intune, Mobile Application Management, and Defender for Endpoint
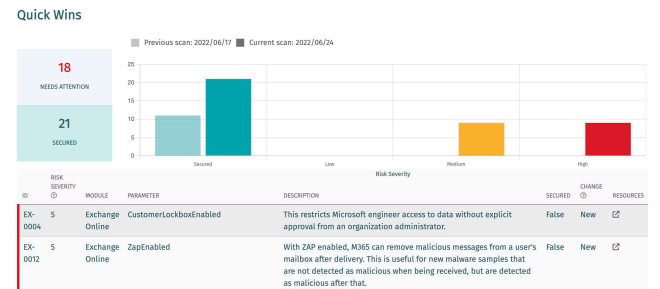

DATA
Secure Data while preserving productivity with Microsoft Purview, Microsoft 365 DLP, and Office Message Encryption.
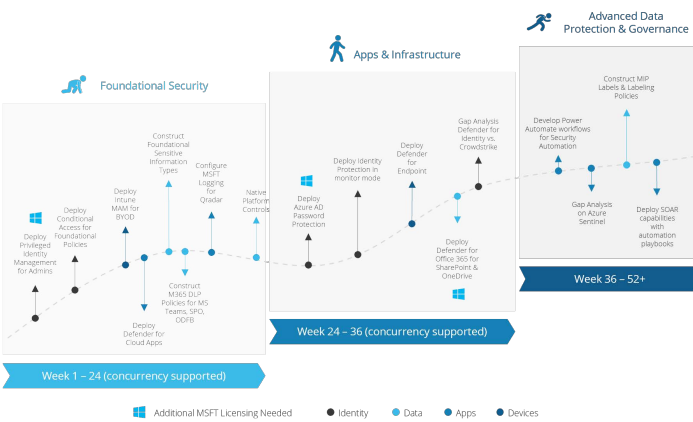

INFRASTRUCTURE
Secure Infrastructure adds layered reporting with Defender for Cloud, Azure Sentinel, and Log analytics.

APPLICATIONS
Discover and set acceptable usage against company applications and Shadow IT with Azure Enterprise applications and Defender for Cloud Apps.

M365 Security Road-Map

Foundational Security
Apps & Infrastructure
Advanced Data Protection & Governance

Week 1 – 24 (concurrency supported)
Week 24 – 36 (concurrency supported)
Week 36 – 52+

Additional MSFT Licensing Needed   ● Identity   ● Data   ● Apps   ● Devices

PROGRAM DELIVERABLES

- Strategic roadmap and deployment schedule

- Gap Analysis between competing security products and the EMS suite

- Decision Log documents combining industry standards, expert best practices, and customer requirements gathered during envisioning and discovery workshops

- As configured documentation with operationalization tactics

- Automated Governance configuration playbook mapping policies to implemented actions

Six - Eight Weeks

Kick Off → Discovery → Curated Program → Delivery & Handoff

Our team of experienced and certified Cloud and Security consultants actively collaborate with your team and work seamlessly to ensure project success aligned to your business objectives. For more information, please contact your Trace3 Cloud representative or find us at Trace3.com.
