Transition Manager

Fast Track Your Project

Accelerate The Journey

Sales Jumpstart

ECIF

Microsoft and **TDS** offer an opportunity to dramatically accelerate your project by rapidly breaking down your IT environment. What better way to get started than to see your data in a way that you've never seen it before? Build confidence and a data-driven plan in a couple of weeks!

Harness the power of TransitionManager and Microsoft to enable your IT teams to see their data in a single location, making that data actionable:

- **Migrations at scale**: What is "re-host eligible" and how can I create an automated, repeatable process that will accelerate these efforts?
- **Graphical view of dependencies**: What are the dependencies across my environment?

AT A GLANCE

TransitionManager analyzes your application and infrastructure inventory using data-driven discovery and analytics tools to discover the key dependencies for safe and rapid application migration to the cloud.

KEY BENEFITS

- **Holistic Asset Inventory**: Quickly builds a comprehensive inventory to enable transformation planning by aggregating and normalizing multiple data sources.
- **Dependency Discovery**: Provides a powerful tool to discover application and infrastructure connections and interdependencies.
- **Stakeholder Confidence:** Enhances understanding and builds confidence in stakeholder-centric transformation planning and management.
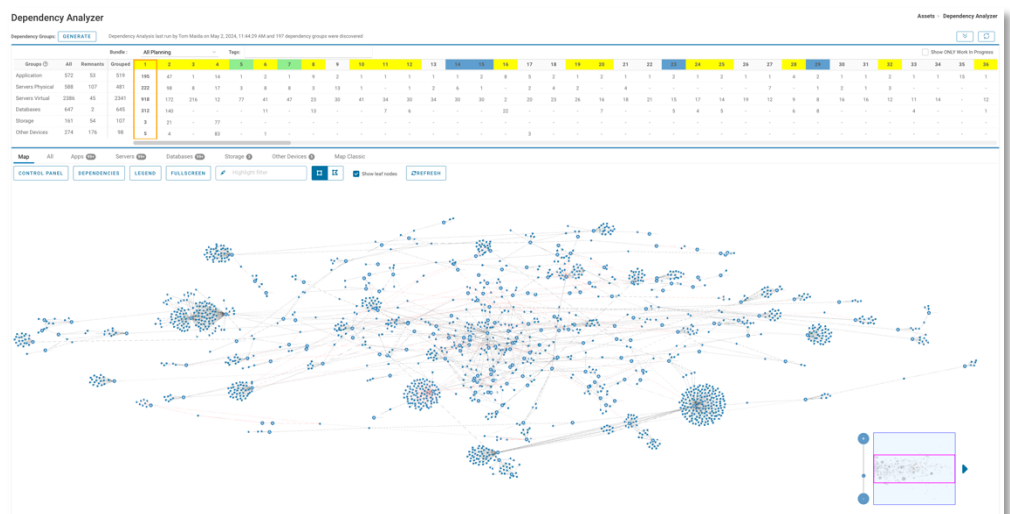

OUTCOMES DELIVERED

- **Presentation of Findings:** Comprehensive walkthrough in TransitionManager with live data, showing everything in a single pane of glass.
- **Environmental Discovery Visualization:** Aggregated inventory and dashboards, including visualized dependency mapping
- **Data Gap Analysis:** Autogenerated gap analysis report for missing or incomplete data

Overview

TransitionManager FastTrack is targeted at providing organizations with the ability to quickly ingest and aggregate data from multiple sources to discover your overall estate, data gaps, and key dependencies of your customers' environments. Example data sources include CMDB and hypervisor exports. Using these key data elements inside TransitionManager, your organization will be able to organize and understand your environment and effects of key factors for prioritization and planning.
