

App in a Day Workshop

Digitise processes, work more efficiently,
become paperless

As a low- or no-code application builder from Microsoft, Power Apps gives you a way to deliver applications to your end users at a rapid pace. When you build a Power App, it works cross-platform - on your phone, web and tablet devices with one click.

Transparency's App in a Day Workshop will get you started on your Power Apps journey, with hands-on labs and content. Run by our Power Platform experts, you'll discover how to create custom business applications without writing code. We'll also discuss how to create sophisticated business processes and leverage complex data relationships within your applications.

Additionally, we will teach you how to connect your apps to a variety of data sources to bring them to life, including Microsoft Dataverse to store business data. We'll also highlight the benefits of Microsoft Power Automate for the automation of emails and approvals.

Your App in a Day Workshop will cover...

Basic Concepts

Connect to data sources and filter results based on specified criteria.

- Work with screens and navigation
- Use controls, properties, formulas and actions to customise the user experience
- Configure app settings
- Save and share an app
- Run an app on a mobile device

Dataverse

Overview of Microsoft Dataverse, including how to:

- Design and create a custom table
- Use the Form control
- Save data into the Dataverse using the Form control

Model-Driven Apps

Begin building model-driven Power Apps. You will learn to:

- Create a standalone model-driven app
- Customise forms for the model-driven app
- Use a Business Process Flow to guide users through a process

Microsoft Power Automate

An introduction to Power Automate. We'll discuss how to:

- Create a flow that is triggered when a new Dataverse record is created
- Automate sending approval requests
- Customise the approval based on the Dataverse record
- Use the Approval Center
