

Microsoft Sentinel Proof of Concept

Microsoft Sentinel: A Cloud native SIEM

The cyber threat landscape is everchanging and requires advanced Cloud security with intelligent and adaptive responses, to best protect an organisations environment. Microsoft Sentinel can help you modernise your approach to security operations and enhance threat detection as well as response capabilities to better protect your organisation.

In comparison to traditional SIEMs, Microsoft Sentinel is a Cloud native SIEM and SOAR system that provides an all-in-one solution for alert detection, investigation, remediation, and proactive threat hunting. Using automation and machine learning, Microsoft Sentinel's modern approach manages even the most sophisticated of attacks.

To showcase the capabilities of Microsoft Sentinel, Transparency are offering a Proof of Concept (POC) that will provide a base level deployment of Microsoft Sentinel into your live environment. This deployment will help you learn more about your company's security posture and how Microsoft Sentinel can help improve it.

What is included in the Proof of Concept?

Scoping & Readiness assessment including documentation of the proposed Microsoft Sentinel deployment / remediation.

Deployment of Microsoft Sentinel as per the Transparency Secure by Design Blueprint.

Enablement of data connectors, workbooks, and analytics rules to enable ongoing monitoring and alert escalation.

Configuration of automation to escalate incidents & alerts to your internal IT team.

Optional: Deployment & configuration of Linux Syslog / CEF components for appliance / server integration.

Outcomes, benefits and next steps

We will provide you with a fully functioning Microsoft Sentinel platform, discuss any discovered threats and demonstrate best practice remediation. If you're interested in taking the next step in your security journey, we also offer a Tactical Managed Sentinel service which provides your organisation with rapid SIEM deployment, ongoing health checks and remedial maintenance as well as monthly Microsoft Sentinel analysis reports from our experts.
