

Copilot drives your business forward

Trask Microsoft 365 Copilot Assessment and Adoption

trask

Key areas

1

Assessment

Quickly identify where Copilot can deliver the greatest impact across Microsoft 365, Power Platform, and Azure. Discover high-value opportunities to automate manual tasks, streamline workflows, and enhance team collaboration.

2

Proof of Concept

We provide up to five proof-of-concept or proof-of-vision solutions based on the complexity of your selected use cases. These may include Copilot Agents, automated workflows, approval processes, or simple apps, giving you a tangible view of what AI-driven automation can deliver for your organization.

3

Governance

As a part of the assessment, we will work closely with your IT team to help them draft governance rules that will protect and secure your Microsoft 365 environments but won't hinder the innovations, citizen development and AI Automations in future.

4

Culture of support and innovation

We help you build internal teams that can drive ongoing innovation and AI adoption across your organization. Through tailored training and guidance, we prepare your people to confidently develop and integrate AI solutions in-house.

Our Expertise

Professionals with experience in process digitalization

We have a strong team with years of experience in digital transformation effort on Microsoft 365 platform in many client projects across different fields of business.

Proven frameworks for AI and Copilot adoption

Practical, tested frameworks for integrating AI, built on deep expertise with Copilot Studio and custom agents.

Alignment with best practices and AI standards

We ensure AI initiatives align with industry best practices and standards while staying on top of the latest AI trends.

References from clients across different sectors

We have 30+ years of experience delivering solutions to manufacturing, automotive, finance and insurance, general administration and other sectors
