

Kickstart your cloud-native journey in 4 steps

Are you considering a migration to a Public Cloud? Before you get started, it is necessary to check your current situation by asking yourself a few key questions. Are your applications ready for the cloud? Are you looking to partner with a (managed) service provider or do you prefer to undertake the journey yourself?

During the True cloud journey, we help you overcome the obstacles and challenges to migrate successfully to the cloud. We will work hands-on together to analyse your current application landscape and determine the must win battles. This will be the base of the True cloud journey.

Our proven approach

Ready for cloud take-off? With our cloud journey you are assured that at the end of the program you know where you stand, what you need to do and what the roadmap will be to achieve success. Our Cloud Architects will kickstart a 4-step program to assess and design your journey to the cloud. After the program you are ready for take-off! True will be able to help with every step you take to the cloud.

The True cloud journey begins with an extensive solution assessment, together we will perform focused deep dives in your business and application landscape. Our Solutions Architects will turn your applications and infrastructure inside out. After analysing all the data and mapping it in an understandable way, we will start our journey together.

Intake & Scoping:

During a discovery workshop we will learn about the current and the desired situation. Based on this perspective we will work towards a technical roadmap and (cloud-native) strategy. During this step you can rely on our extensive knowledge and our vast experience with Public Cloud migrations.

Assessment - Application landscape:

After the discovery phase we will continue with the solution assessment. The assessment consists of a thorough analysis of your documentation and various workshops. The first session will focus on your organisation and business goals. Your infrastructure, management and development will be the main focus during the second technical session. In these sessions we will not lose sight of your processes, users and usage of applications.

Report & Design

(desired) application architecture: All feedback from the workshops is summarized in a Solution Assessment Report, including a clear executive summary. Based on the input obtained from the workshops in Step 2, a (high/low) level design of the desired target architecture is created.

Planning & Roadmap:

After discussing and finetuning the desired architecture, the True project team draws up a clear roadmap with milestones to be achieved. This will be the starting point for the joint initial (90 days) planning.

Our project promises

Describes the deliverables / result of the project

- Solutions Assessment report
- Architectural High Level Design (HLD) or Low Level Design (LLD)
- 90-day roadmap (version 1)

Our unique offer

Let True help you define your cloud-native journey using a proven 4 step approach.

- Get to know each other (workshop)
- Solution Assessment (deliverable)
- Cloud Native Blueprint (deliverable)
- Defining your cloud-native journey (workshop)

Investment: €5.000,-

About True

Every day we team up with the best Agencies, E-Commerce companies and SaaS developers. From start-ups to scale-ups and from enterprises to governments and non-profits. Using a multi-disciplinary approach, we ensure their (web) applications, webshops and portals continue to develop in the most scalable way. So that every change becomes an acceleration of progress.

True is based in Amsterdam, with 100 specialists we host the ambitions of our customers since 2000. The more than five hundred customers who offer mission-critical services through the web are completely serviced by True with managed hosting, Kubernetes and security solutions.

True provides its services from three data centers and Microsoft Azure. The entire chain of middleware, infrastructure, server and storage equipment is proactively managed by True's specialists. True holds the Advanced Specialization 'Kubernetes on Microsoft Azure' from Microsoft, is a member of the Cloud Native Computing Foundation (CNCF), and a Kubernetes Certified Service Provider (KCSP). True is ISO-9001, ISO-27001 and NEN-7510 certified and has an ISAE 3402-Type 2 reporting.
