

Microsoft Fabric and Trustmarque

The data platform for the era of AI

Microsoft Fabric is a unified SaaS platform designed to streamline data integration, engineering, warehousing, data science, AI, real-time analytics, and Power BI.

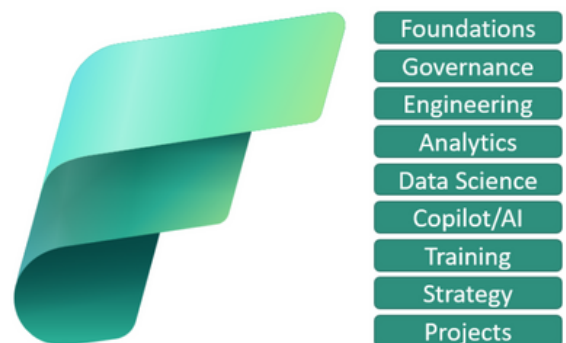

Why Microsoft Fabric?

Microsoft Fabric enables faster transition from technology to insight and minimises the dependency on complex, technology-centric solutions.

- Seamlessly deployed, unified SaaS Data Platform
- Integrated AI and ML
- Infinitely scalable, cloud-native, and fully interoperable
- Real-time data processing
- User-friendly interface simplifies adoption
- Cost-effective data democratisation across your organisation
- Save time and optimise data quality by automating workflow

Why Trustmarque?

Trustmarque are subject matter experts in the implementation of Microsoft Fabric, Power BI and data analytics at numerous public and private sector organisations. We know the technology, we know the pressures and outcomes required. We specialise in upskilling your team.

Key benefits :

✓ **Strategic Impact:**

- Build Fabric Skills: A SaaS product designed around your existing skills where most tasks can be done in visual interfaces or via code, typically Python or SQL in open source formats and libraries.
- Enhanced Data Federation: Microsoft Fabric enables seamless, secure integration and federation of data across various systems.
- Improve Decision Making: Integrates with Microsoft 365 applications, enabling data-driven insights across the organisation.

Unified Data Experience:

- ✓ ◦ OneLake: Centralised data lake for seamless data access and management. Your single version of the truth.
- Integration and Partner workloads: Open standards and seamless integration with many Microsoft partner workloads such as Databricks, Snowflake and Informatica.

Enhanced Productivity:

- ✓ ◦ AI-Powered Features: Built-in AI capabilities, including Copilot, to automate and enhance data workflows.
- Simplified Data Management: Reduces the complexity of managing multiple databases and services a single interface for security, audit and compliance.

✓ **Scalability and Flexibility:**

- Cloud Based and future proof: Build on scalable cloud architecture to support every complexity of workflows.
- Streaming Data and IOT: Combine live events like observations with historical data.

✓ **Cost Efficiency:**

- Reduced Integration Costs: Minimises the need for multiple specialised solutions and most of the platform costs.
- Optimised Resource Utilisation: Streamline infrastructure, reduce data sprawl, modernise and migrate.
