Azure VMware Solution (AVS) Workshop

Service Description

The Trustmarque workshop aims to familiarise you with Azure VMware Solution (AVS) and show you how you can move or extend your on-premise VMware environments to Microsoft Azure and the benefits that can be gained from such a move.

AVS allows you to seamlessly run your VMware workloads natively on Azure. You can move VMware-based workloads from your data centre to Azure and integrate your VMware environment with Azure. Keep managing your existing environments with the same VMware tools you already know while you modernise your applications with Azure native services. Azure VMware Solution is a Microsoft service, verified by VMware, that runs on Azure infrastructure.

The Workshop will be conducted by our experienced and accredited VMWare and Microsoft Azure Consultants.

Service Approach

The workshop covers the following areas:

- Overview of the Azure VMware Solution
- Gain an understanding of your current VMware estate
- Overview of migration methods

Optional elements below can also be covered:

- Advice on modernising the on-prem environment
- How you could secure and protect a new hybrid environment

Service Deliverables

After the Assessment, you will have a good high-level understanding of:

- The AVS offering and the associated features, functionality and benefits
- How you can integrate AVS with your on-premise environment
- Migration approaches
- How you can take advantage of Azure's broad suite of native services

What we offer

The Trustmarque workshop aims to familiarise you with Azure VMware Solution (AVS) and show you how you can move or extend your on-premise VMware environments to Microsoft Azure and the benefits that can be gained from such a move.

AVS Use Cases

- Datacentre footprint reduction, consolidation, and retirement
- Datacentre expansion based on demand
- Disaster recovery and business continuity
- Application modernization
