

Copilot for modern work advisory

Discover the possibilities, of Windows Copilot, Microsoft 365 Copilot and Bing Enterprise

Trustmarque, your Copilot partner of choice

Windows. Microsoft 365. Azure. Power Platform. We are fluent in all things Microsoft. That's why we are one of the UK's most accredited Microsoft partners with all six cloud designations. As a strategic partner to Microsoft, we support their commitment to the empowerment of every person and every organisation to achieve more.

Artificial Intelligence powered productivity

2023 has seen Artificial Intelligence make a huge leap forward in inspiring organisations and workers with the introduction of innovative services such as ChatGPT which promise insights as to how AI is going to take automation and productivity to the next level.

Microsoft 365 Copilot is a powerful tool that helps you create engaging and effective content with ease. Copilot has a wide range of capabilities and uses artificial intelligence to analyse content, suggest improvements, generate new ideas, and optimise your tone and style. With Copilot, workers can save time, boost productivity, and focus more time on the things that really matter.

Discovery the potential of Copilot

The Trustmarque "Copilot for Modern work" capability review, helps customers better understand the capability of Microsoft AI and how it might be applied to add specific business value to the productivity of staff and to begin to understand the high level steps required for a future deployment, and to take full advantage of Copilot's potential. The review consists of two stages "Immersion experience for Modern Work Copilot" and "Next steps" which is usually delivered in a single day.

- Immersion Experience for Modern Work CoPilot . This is a business centric workshop for a business stakeholder audience. The Immersion Experience is a hands on demonstration of Microsoft 365 and Windows Copilot and how users of Windows 11, Office 365 and the office applications are able use Windows Copilot, Microsoft 365 Copilot and Bing Enterprise to work more effectively and productively. Whilst this session could include some technical discussions, it is primarily focused on the benefits to the end user and will include real work scenarios of how Copilot can be utilised.
- Next Steps, The afternoon of the review is dedicated to understanding the steps required for a future success full implementation. The session is more technically focused but will include, not only the technical dependencies, but also security compliance considerations as well as what is required to empower users in getting the most out of the technology.

Deliverables: Finding and recommendations summary, including the high-level business scenarios that were identified in specifically benefiting the customer organisation as well as a summary of recommended next steps indented to guide customers to a future deployment.
