

INCREASE SIGN-IN SECURITY

Protected remote worker from the first line

Customer value proposition

To increase the security of sign-ins of your remote worker, customers deploy Conditional Access policies. User account name is a member of a group for users that are assigned the Exchange, sharepoint, teams will require multi-factor authentication before allowing access.

Services

- Migrate email from on-premise to M365.
- Build SSO system.
- Survey the current sign-ins status and report.
- Consultant policies are suitable for the company.
- Deploy conditional access policies.
- Training for users about sign-in security.

Why customer use services ?

- Solution might require remote worker to use MFA to ensure secure login.
- Blocking or granting access from specific locations.
- Address compliance and governance.
- Cost consistent with SMB.

Compliance & Governance

- Use many common signals such as IP, device, application...
- Use common decisions such as block access and grant access.
- Use common polices such as require MFA, blocking risky sign-in behaviors.

Manage Risk

- Automating risk assessment with policy conditions.
- Detect anomalies and suspicious events.

Manage Cost

- Moving access policies to Azure AD reduces the reliance on custom.
- Reduce infrastructure investment costs.

"After implementing Conditional Access, we eliminated some security risks before the remote worker accessed company data."

- Mr Khoa, IT Manager, Crowe Company

How Condition Access works, to achieve business benefits

Proof & Statistics

- Increase the security of remote workers by 2 times compared to the old system.
- 99% control over risks when logging in remotely.
- 70% cost reduction compared to building on-premise system.

Proof & Statistics of Joint Solution

- 100% of remote workers are trained in security measures when working remotely.
- 100% of unauthorized access are blocked before accessing the data.

3rd Value is Optional - Proof & Statistics of Joint Solution

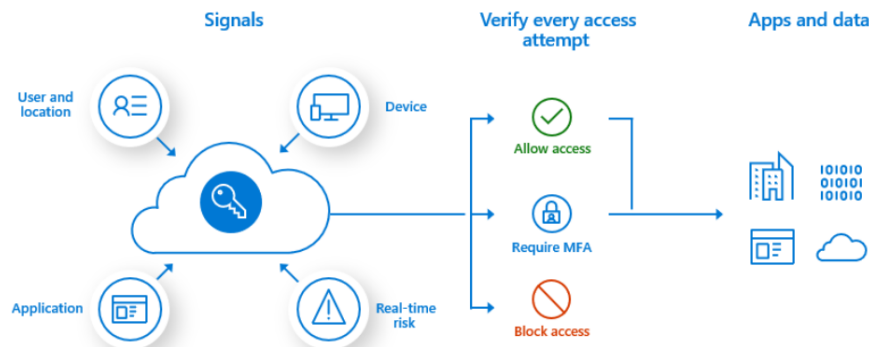

- Ensure safety when starting to access the system.
- Protect remote workers from outside risks.
- Restricting unauthorized data access.

Our promise to you

Our solution has taken care of the risks of security to remote workers for customers.

An offer to get you started

- We will support training for remote workers for 2 hours to access data securely.
- We assist customers with POC solutions before actual implementation Proof this offer is of value.
- Support customers to optimize after deploy.
- We host workshops to provide training in premium services and solutions on secure remote work.

Optimal solution with risk reduction and cost

- 70% off cost to build solution on on-premises.
- 80% reduction in the risk of unauthorized login.
- 30% less time spent on IT staff in accessing and managing.

Why TSG ?

- Experience in deploying secure remote work.
- Gold Partner of Microsoft.
- With a team of experienced Microsoft security solutions.
