27GLOBAL™

CLOUD TRANSFORMATION

Almost overnight, moving to the cloud has become an absolute necessity for ensuring a company's business continuity and long-term existence. To avoid unnecessary challenges, organizations need an experienced cloud partner to deliver a tailored and optimal solution.

Let's get your head in the clouds.

We recognized early the benefit of using cloud technologies to decrease time to market and reduce development costs. By leveraging the cloud, we can focus on your unique business challenges while mitigating costs. Whether retiring an older platform or moving workloads into the cloud, 27Global will outline the steps needed to make the transformation as seamless as possible.
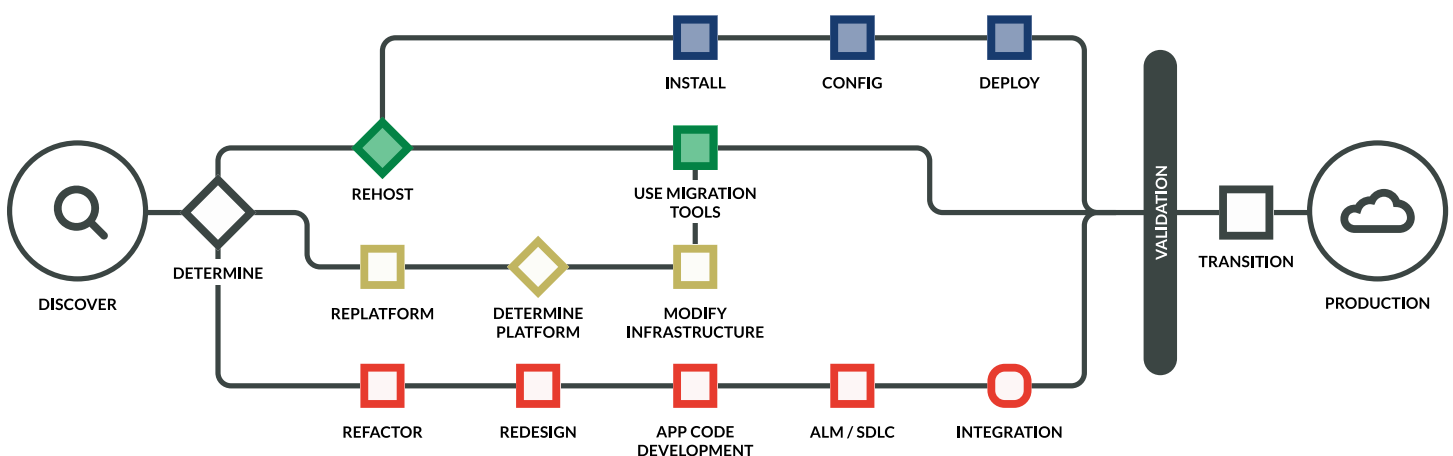

Whether it's re-platforming existing applications or re-architecting, let 27Global's cloud experts guide and execute your move to the cloud as seamlessly as possible. We'll analyze your applications and infrastructure to define the optimal cloud, multi-cloud or hybrid cloud solutions and develop a road map for getting there.

How do we help?

27Global will:

- Analyze applications and infrastructure to define your optimal cloud solution (public, private, multi-cloud or hybrid)

- Develop a strategic migration road map

- Focus on re-platforming and re-architecting instead of simply re-hosting

- Retire antiquated platforms

- Update migrated apps to take advantage of cloud capabilities and economics

- Continue to monitor your infrastructure to optimize resources

27Global's 3 R's of App Migration & Modernization

INSTALL   CONFIG   DEPLOY

REHOST   USE MIGRATION TOOLS

REPLATFORM   DETERMINE PLATFORM   MODIFY INFRASTRUCTURE

VALIDATION   TRANSITION   PRODUCTION

REFACTOR   REDESIGN   APP CODE DEVELOPMENT   ALM / SDLC   INTEGRATION

27GLOBAL

27Global's Cloud-Native Software Solutions

27Global's proven track record of delivering Cloud-Native software solutions, combined with our Cloud and DevOps expertise, will guide and execute your move to the cloud.

We'll analyze your applications and infrastructure to define the best customized cloud solution for your business, and then develop a road map for getting there.

Help your company scale, stay competitive, innovate and save money all at the same time.

Discovery

GOAL:

Interview stakeholders to understand all underlying business goals, growth strategy, and functional requirements that will guide, and must be supported by, the Client's move to the cloud.

Understand functionality of existing applications that are in use and needed. Evaluate if all or a portion are providing business value to drive recommendations for refactoring or replacing applications.

Definition

GOAL:

Establish future cloud environment requirements; Compare with industry's cloud best practices to ensure compliance

ID all on-prem dependencies within existing applications, including data sources and workflows

Prioritize the order in which applications are migrated; Identify any opportunities for containerization

Develop strategic migration road map + cloud cost analysis

Data Analysis

GOAL:

Understand data landscape- mapping current data architecture to data sources and dependent applications

Optimize/streamline database design for data sync and recovery/backup/retention

Provide Future/Target State data architecture + Data migration road map

Cloud Transformation

GOAL:

Prepare apps and data for migration; Establish automated deployment via CI/CD pipelines; Execute migrations based on road map guidance

Once migrated, confirm with Client that each app meets business requirements
