27GLOBAL

SOFTWARE PROJECT RESCUE

Software projects can face a multitude of challenges throughout the development process. To diagnose the root cause of a struggling project, companies need resources and expertise to produce efficient remedies.
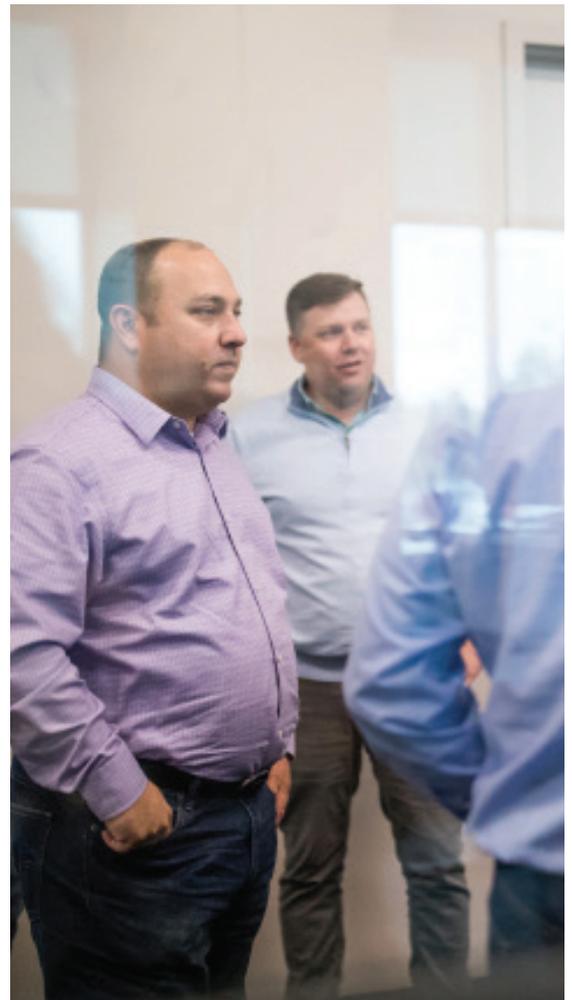

The 27Global Approach

27Global has extensive experience taking over struggling projects. We have the soft skills to align stakeholders and development teams in a unified product vision, along with the technical strength and experience to solve complex technical challenges. The same holistic approach we use for software development can be applied to get a project back on track.

27Global's team of local consultants and architects work with clients in the planning phase to define:

- A unified product vision
- Business objectives, scope, high-level functional and technical requirements
- Product backlog and road map
- Resource requirements to sustain a successful Agile development project

27GLOBAL

Our team of experts then identify all of the factors contributing to a struggling project and provide a multitude of deliverables during a two- to six-week engagement, including:
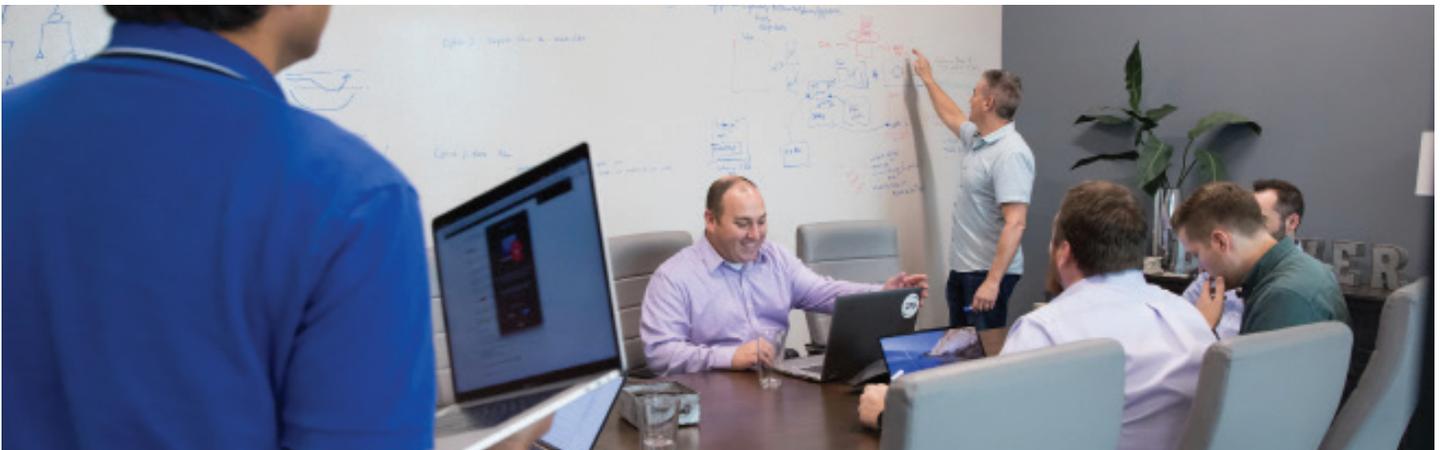

DIAGNOSTIC REVIEW AND ANALYSIS

- Architecture, code and software frameworks
- Pre-production and production environments and infrastructure
- Code deployment practices
- Agile development practices
- Scrum team skills inventory

REMEDIATION PLAN

- Solutions to issues found in Diagnostic Review and Analysis
- Prioritization and estimation of solutions
- Detailed implementation plan

The 27Global Difference

27Global's Software Project Rescue – Project Rx – solution is suited for diagnosing, prescribing and remedying projects challenged by a range of issues and impediments. We strive to re-energize the project and alleviate existing frustrations by tailoring recommendations to each product with a holistic, technology-agnostic approach.

Let 27Global prescribe the work required to save time, money and get your project back on track.
