The TwoConnect Connection

TwoConnect builds modern, integrated software and data solutions on Microsoft Azure.

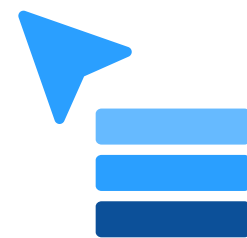

We merge Microsoft and Open-Source technologies to deliver real business benefits that save time and money.

TwoConnect's Step-by-Step Process to an Azure Logic Apps Integration Solution

If you are considering an Azure Logic Apps implementation, follow these simple steps:

1. Select the pre-built components you need for your business process.

2. Use the design tool to build your workflow using your components.

3. Save your design and it will run automatically in the cloud.

And then let TwoConnect help!

The Introduction and complete picture

We begin by introducing TwoConnect's development techniques, describing various deployment scenarios, comparing Azure Logic Apps to other existing solutions, demonstrating how Azure Logic Apps and Azure Function Apps work together, and comparing Azure Logic Apps to those from other vendors.

The Assessment

Next comes an analysis of your business processes to identify those that best align to Azure Logic Apps, including those suited to serverless cloud. From this, we build use cases, conduct gap analysis, develop a roadmap, and estimate initial time involvement and cost

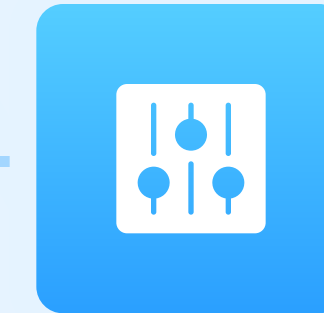

Proof of Concept

This phase involves implementing a sandbox environment to view the initial proposal, adjusting the gap analysis and roadmap, and then designing an initial test solution

Implementation

During implementation, the solution is developed, tested, and deployed using iterative highly agile development methodology. All processes and artifacts are documents, and all knowledge transfer to appropriate personnel is complete

Management

The final phase includes management and support of your new serverless integration/workflow solution, establishing support and escalation procedures, and regression testing implementation of feature enhancements or fixes.

And That's Not All!

TwoConnect Simplifies Modern Software Development

Imagine a new software universe where implementing software changes goes from 6 to 8 weeks to 6 to 8 minutes. At TwoConnect, we build modern, integrated software apps and data solutions. We successfully merge the worlds of Microsoft and Open Source to bring powerful business solutions to organizations everywhere.

We Build Powerful Integration Solutions

TwoConnect simplifies modern software development for everyone through our team of amazing Microsoft MVPs, Azure Developers (all certified in latest exam AZ-203), development managers, trainers, and our extended worldwide community of integration experts with whom we've partnered for over two decades.

At TwoConnect, we come to work every day because we want to write code that solves business challenges, work transparently with our customers, and present solutions that both inform and educate.

If you want to pursue whether an Azure Logic Apps integration solution is right for you and how TwoConnect can help, read about TwoConnect's integration solutions using Azure Logic Apps.
