BUSINESS PROCESS ASSESSMENT

Times have changed, new entrants are coming into the market, there is a constant need to stay relevant, to survive and grow, and companies are reaching a point where they can't create any more efficiencies out of their current processes.

Thankfully, advances in technology have made it easier and faster for people from all areas of business to create applications through low code platforms. These platforms are providing accessible applications, analytics, automation, and even AI solutions, and are driving business process transformation for the following reasons.

- Overall operational efficiency
- Reduction of technical debt
- Business agility
- Employee productivity
- Improved customer experience

UBDS will identify and assess the value of using Microsoft Power Platform to tackle these business challenges:
- Meeting new business needs
- Reimagining existing processes and apps
- Sunsetting legacy technologies
- Supporting citizen developer productivity

The Business Process Assessment gives our clients an in-depth analysis of all their applications using 6R Analysis – highlighting which ones to retire, rebuild, reimagine, replace, replatform, or rehost. We help our clients to understand the applications purpose, value and criticality to the business and can then create a business case for low-code or no-code transformation.

Gold

Partner

Microsoft

Organisations turn to UBDS for our deep knowledge, specialist skills, years of on-the-job experience and our can-do and get-it-done culture.

As a highly accredited Microsoft Gold Partner, we work with our customers to deliver high impact and outcomes-driven solutions and services. We exist to deliver significant, measurable and sustainable digital transformation, and we achieve this by delivering value to our clients in the following ways:

- Accelerating change
- Ensuring frictionless, high performance
- Mitigating risk and ensuring security

What to expect from the UBDS Business Process Assessment

- Identification and prioritisation of applications / workflows based on visibility, complexity, criticality and severity
- Interviews and analysis of apps / workflows with relevant business stakeholders, including understanding of current challenges, process stages from start to finish and desired improvement.
- Business opportunities identified as well as risks, concerns and blockers established
- Modernisation strategy with an actionable set of recommendations from the Microsoft technology stack

Whatever stage of the journey you are in, UBDS can help

Low Code Strategy
We help organisations define the business case, strategy, and operating model for Low Code. This defines what the boundaries of use are for the platform, what license model is best fit for your use cases, and how this fits in with your wider Digital Strategy.

Low Code Centre of Excellence
We define the guiding principles that help you implement your Low Code Centre of Excellence with appropriate levels of standards, support levels, test strategies, environment strategy, CI/CD, automated test tooling, and RBAC.

Tailored Solutions
We design, develop, deploy and support custom solutions for your business and user needs and help you to deliver against your Low Code strategy.

Building your in-house skills
Through standard and custom technical training, we transfer Low Code application development capabilities to our clients, giving your team the skills and experience to build and support apps through technology such as Microsoft Power Platform.
