

Ubiquity Systems

Ubiquity Systems helps your Bank gravitate away from on-site servers to Azure cloud resources. Azure is perfect for your Bank's Big Data uses. The data and systems for your various departments can be migrated to the cloud for a convenient, cost-effective approach.

Ubiquity Systems also focuses on implementing software solutions for your Bank to enhance its processes, by making them more efficient to allow you the ability to generate additional revenue.

Our initial software offering, The **A**merican **C**ommercial **C**redit **U**nderwriter, is designed to do exactly that for your Bank's Commercial Credit Underwriting process. Please see the website link below for a product description.

You can contact us below for a 2-week Demo of the ACCU.

We also handle software development for your Bank's in-house processes. Please inquire for a project completion estimate.
