READI Platform
RAPID. REPEATABLE. READI™

Automate your identity processes with an identity automation platform, designed by, and for, IT professionals

READI Platform at a Glance

The READI platform is purpose built to extend the automation capabilities of your IGA and ITSM. Here's why our customers view it as the best solution:

Automation-as-a-Service (AaaS).

100% cloud-based SaaS solution. Nothing to deploy, creating maximum time-to-value.

Low-Code Automation

Rapidly modify or create your own bots with just a few lines of PowerShell code. No Java or C expertise required.

Dynamic UI

No complicated UI frameworks or, excessive and fragile code, and no duplicating work for different devices. The READI platform dynamically creates adaptive UIs that instantly adapt to your change.

Elastic Architecture

Built on the Microsoft Azure platform, the READI platform's elastic architecture allows you to automate any workload without limits.

Multi-Use Bots

Write a single TaskBot and use it to support all your automation needs, including autonomous automation, interactive IT and help-desk tools, and end-user self-service helpers.

Don't rip-and-replace your IGA or ITSM to get the automation you need. Make them better.

Adding the READI platform brings them into the modern age

Don't believe the hype, your relationship with your IGA and ITSM has a long life ahead of it. Add real identity automation with the READI platform, and get the IGA and ITSM you paid for without ripping and replacing.

Why the READI platform from Readibots is the best choice for identity automation.

Connect to anything and everything without charge.

Connect to cloud, on-premise, and custom applications without worrying about utilization or per-connector costs.

Ditch the compiler. Rapidly build with low-code.

Extending the capabilities of an IGA or ITSM can be expensive and risky with Java and C based code. Your IT gurus can easily create TaskBots with just a few commands.

### No need to change your processes to get value.

Automate your process, don't change it. Take what you have and make it repeatable, reliable, and secure in no time. Becoming productive shouldn't start with making it worse.

Secure by design. Secure through use.

Protect your automation code from inception to execution, then let your new robotic workforce make changes in real time to ensure compliance and heighten security.

Come for identity, stay for the platform.

Identity is everything, and everything starts with identity. But what about all the things your people use and do? The READI platform is prepared to scale and automate your entire enterprise.

DEPROVISIONING PROCESS
1. ARCHIVE MAILBOX
2. SETUP EMAIL FORWARDING
3. WIPE AND BLOCK MOBILE DEVICES
4. BLOCK ACCESS TO INTERNAL DATA
6. REMOVE COMPANY DATA FROM PERSONAL MACHINES
5. ARCHIVE DATA AND REASSIGN OWNERSHIP
7. DISABLE/REMOVE AND RECLAIM ANY SOFTWARE LICENSES
8. DELETE/DISABLE ANY AND ALL USER ACCOUNTS

IDENTITY AUTOMATION

How It Works

The READI platform is the easiest way to automate your entire identity lifecycle. Whether your current identity program focuses on your IGA, ITSM, or a combination of the two, Readibots can propel you to real identity automation at least 10 times faster than either of them can alone. Heres how it works:

1	2	3	4	5
Register your IGA/ITSM in the READI platform.	Configure your IGA/ITSM to send /receive events.	Forward events from your IGA, or tickets from your ITSM.	Atomic TaskBots execute the task and verify completion.	Readibots notifies the sender (IGA or ITSM) of completion.
