# Readibots

Rapid. Repeatable. READI™

The Identity Driven Platform that Delivers Immediate Results

The Identity Driven Solutions Platform

IGA, ITSM, SIEM, ITDR, TIP, SOAR and more provide overwhelming amounts of intelligence for SecOps and Operations; and leave it to your teams to respond. The response is highly manual (slow) or custom scripts (ungoverned) have been written to address these alerts. Readibots governed identity driven automation is key to responding to both critical alerts immediately and general requests currently bombarding your teams.

Readibots provides a bridge between Security and Operations. The Security Team provides requirements to keep the company secure and the Operational Team implements the automation according to their existing processes. The Readibots solution is centrally governed and secure providing complete automation for the Operations Team which closes threat windows and reduces the mean time to resolution (MTTR).

Readibots Allows You to Automate and Visualize Any Process for Any Platform

Identity

Identity-Driven automation to connect platforms for a seamless solution with the READI platform. Automate existing processes and extend the life of your IGA platform. Build your own holistic identity automation framework and ensure consistent, repeatable, automation.

Security

Readibots brings true automated remediation to your SOC.

Highly productive, rapid response playbooks, that are both created and maintained by the people who understand the process; and have the expertise and the accesses required to resolve any issue. Whether that's search and destroy operations across tens-of-thousands of mailboxes or wiping an endpoint, delegation to the Ops Team is a key differentiator that makes for extremely smart and accurate Playbooks.

Service Desk

Empower your service desk with immediate resolution as tickets are received which reduces the existing workload and the need for escalations or expensive training. Readibots Playbooks are consistent, repeatable and governed so you can visualize the process. Improve your satisfaction metrics by responding to tickets faster and reduce costs with a robotic service desk.

Licensing

Get control of your software licensing by visualizing who has licenses, do they need and are they using their licenses across all applications and tenants. Bots ensure your people always have the right license for their current needs and identify those that aren't being used that you can reclaim. Use the READI platform to monitor, alert, and even automatically control resource usage.

Communication

Communicate information to the correct people with the urgency required through the channels which are most effective for your teams. Readibots integrates with your communication technologies (Microsoft Teams, Chat, SMS, email, etc.) and provides a powerful extension to your messaging capabilities.

About Readibots

At Readibots, we're revolutionizing the way businesses approach IT automation and security. Our SaaS platform uses innovative, cutting-edge technology to streamline processes and improve efficiency for all types of organizations. From pre-built bots that connect to primary systems to custom bots that can handle specialized tasks, Readibots has the tools to transform manual processes into efficient and secure automations. We're not just changing the game; we're defining the future of IT automation and security.
