Multi-Cloud Server Management & Monitoring on Microsoft Azure

Downtime and data loss are a major risk for today's businesses, but digital infrastructure problems do not simply appear out of nowhere. The vast majority of critical IT incidents are preceded by smaller faults and warning signs that, if monitored and acted, can prevent a costly outage.

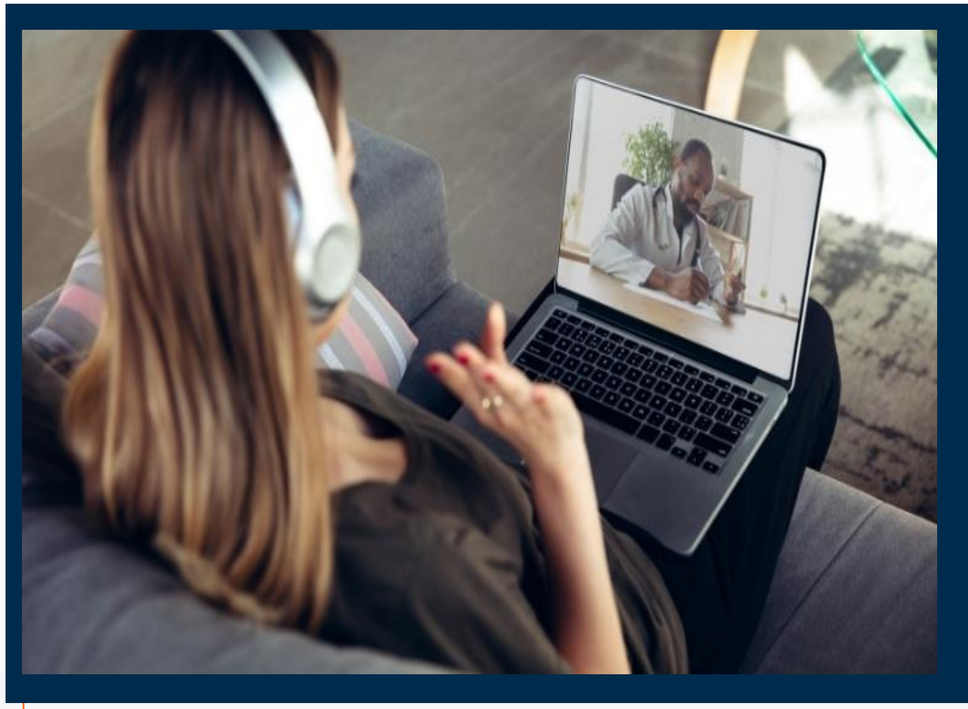
UCMC
Sermon Pro

At UCMC, we use our systems integration expertise and partnerships with leading OEMs to tailor proactive monitoring solutions, which detect issues in your servers, storage, networking, infrastructure and software products.

By catching early warning signs and remediating problems fast, you can stop issues turning into critical incidents.



CHALLENGES

Downtime and data loss

Costly Outage

Loss of Productive Hours

IDEAL SOLUTION

By catching early warning signs and remediating problems fast, you can stop issues turning into critical incidents.

DESIRED OUTCOMES

Increase IT availability

Improve productivity

Make significant cost savings

GBM

Monitoring System on Microsoft Azure offers a simple and cost-effective approach to monitoring your Infrastructure.

Well suited for Infrastructure where it is inconvenient or impossible to directly connect to your infrastructure or where constant monitoring is required for critical environment. Typical industries include manufacturing, power, banking , oil & gas.

1

Monitoring System

The system is equipped with the WebAdvantage reporting system to allow constant monitoring of multiple devices.

2

Proactive Approach

Optimize resource utilization, prevent outages, detect issues and performance bottlenecks early by monitoring the server metrics.

3

GBM & Microsoft

The GBM (UCMC) and Microsoft Azure integrated solution leverages Azure for extending your capabilities and workflow.
