ON-PREMISES ENVIROMENT

for Microsoft Dynamics 365

When thinking of an upgrade of your Microsoft Dynamics AX 2009 or 2012, you can have the following choice: D365 migration to "the cloud environment" or an 'on-premises' environment.
Although the cloud has a lot of benefits, it might not be suiting all. For example, you might get some legal & compliance issues when choosing to store your company data on the cloud. That's why an on-premise environment can be an alternative.

Introducing On-Premise

Microsoft Dynamics 365 Finance & Operations (on-premises) supports running business processes in customer data centers. With this deployment option, application servers and the Microsoft SQL Server database will run in the customer's data center. Customers and partners will utilize Microsoft Dynamics Lifecycle Services (LCS) to manage their on-premises deployments.

SOLUTION
A COMPLETE OWNERSHIP AND CONTROL; ANY CHANGES, CONFIGURATIONS AND UPGRADES ARE DONE ON THE DISCRETION.

The on-premises deployment option uses cloud components running on-premises using Microsoft Azure Server Service Fabric standalone clusters. Service Fabric is the next-generation Microsoft middleware platform for building and managing enterprise-class high-scale applications.

For customers who choose to run Finance & Operations app in their own data center, the on-premises deployment option will have a similar user-interface and application functionality as other deployment options.

However, customers must take on the following responsibilities:

- Stand up their own infrastructure
- Manage their infrastructure, including scheduling operating system updates
- Configure their own high-availability and disaster recovery solutions
- Stand up sandbox environments

RESULT
IN AN ON-PREMISES ENVIRONMENT, COMPANIES HAVE ALSO AN COMPLETE CONTROL OVER THEIR DATA, HARDWARE AND MAINTAIN 100 PERCENT PRIVACY.

Ultimate Software supports customers in the migration to a D365 on premises, and will provide:

- An on-premises architecture
- The Migration to the new on-premise environment
- Daily functional and technical support
- Second opinion for an already installed on premise installation
