

UnifyCloud Discover Once, Many Engagements

CloudSupervisor Azure is an analytical reporting tool which helps users monitor and manage applications, databases and other workloads after they've migrated to the cloud. It provides a holistic view of your cloud environment in order to help you monitor and manage applications. It monitors your cybersecurity and compliance with various GRC controls while dashboards provide usage tracking and cost reports. Use this information to streamline and maintain the health of your cloud IT landscape.

Key Benefits and Capabilities

Migrating to the cloud is not "once and done". It is an ongoing process. **CloudSupervisor** is used to monitor applications after they are migrated to the cloud to provide visibility into the underlying cloud services.

Awareness of Service Use

Insight into which services are providing the most value and how to optimize the environment.

Security Alerts

Track issues based on severity and get security recommendations to manage and minimize risk.

	\sim
\$=	
	騆

Avoid Paying Costly Overages

Get costing recommendations based on data gathered from your current environment and usage.

Around the Clock Monitoring

Daily reporting on usage, compliance, and standards to manage changes in the IT landscape.

Compliance Management

Monitor cloud infrastructure support and compliance to ensure standards are met (GDPR, HIPAA, PCI, etc.)

Monitor your cloud infrastructure controls to meet designated enterprise requirements.

Managing Cloud Environments with Ease

CloudSupervisor gives you the necessary tools to manage your entire cloud infrastructure, including costs, compliance and security effectively via holistic dashboards as well as detailed data drill downs.
