PURVIEW INFORMATION PROTECTION

Safeguard Your Documents and Data Across Platforms

UNIFY Solutions delivers expert consulting services to deploy Microsoft Purview Information Protection throughout your enterprise. This robust solution automates the classification, labelling, and security of data based on its level of sensitivity, maintaining its integrity across various environments, from mobile devices to cloud platforms

The Challenge

Businesses must protect sensitive data that resides in diverse locations, often traversing organisational boundaries. Effective management and security of this data, while ensuring accessibility and compliance, is a complex but essential task.

Our implementation includes precise identification of sensitive data locations and mechanisms to regulate its movement within and outside the company, reinforcing data governance and compliance.

How Microsoft Purview Information Protection Can Protect You

1. **Automated Data Handling:** Automatically classifies and secures data by applying sensitivity labels that adhere to your company's policies, bolstering both security and regulatory compliance.

2. **Persistent Security Measures:** Keeps protection settings intact regardless of data location, preventing unauthorised access at all times.

3. **Enhanced Oversight and Regulation:** Increases transparency over data storage and usage, improving your ability to manage risks and adhere to governance standards.

4. **Extensive Integration across Environments:** Integrates not only with Microsoft products but also with third-party platforms and Cloud environments, providing more comprehensive coverage for data protection.

5. **AI-Driven Classification and Protection:** Uses AI capabilities that improve the automation of data discovery and classification, which are now integral to Microsoft Purview. This includes the use of AI to handle increasingly complex data environments and manage sensitive information proactively

UNIFY Solutions Services to Implement Information Protection

Our security specialists help you deploy and manage the Microsoft Purview Information Protection, ensuring that your organisation is fully protected. From initial assessment to ongoing management, we provide a complete range of services tailored to your needs.

Current State Assessments

- **Stakeholder Engagement:** Pinpoint vulnerabilities through comprehensive analysis of current cybersecurity measures.
- **Risk Mapping:** Identify and evaluate risks to tailor security enhancements
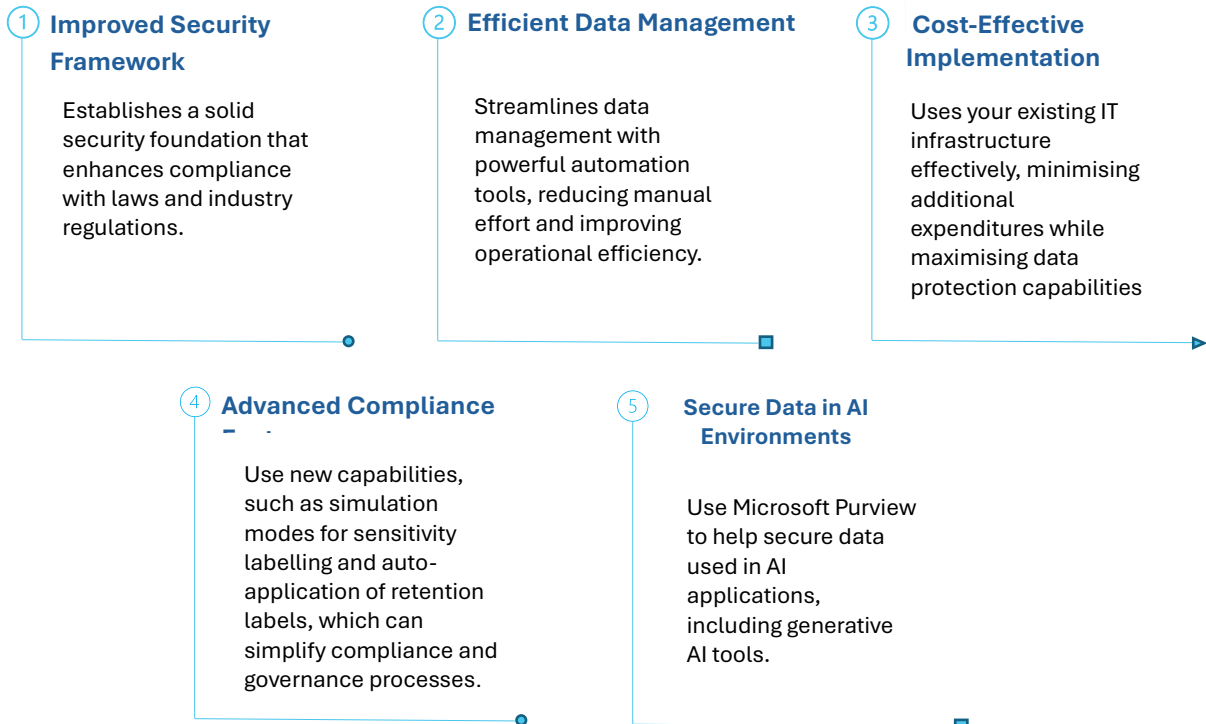

Design & Implementation

- **Custom Security Designs:** Develop and deploy tailored solutions ensuring thorough data protection.
- **Efficient Deployment:** Implement with minimal operational disruption

Managed Services

- **24/7 Monitoring:** Continuously monitor and rapidly respond to emerging threats to maintain robust defence levels
- **Regulatory Compliance:** Ensure ongoing compliance with stringent policies and detailed reporting

Purview Outcomes

Experience the strategic advantages of Microsoft Purview Information Protection, which delivers key improvements across data security, compliance management, and operational efficiency.

1. **Improved Security Framework**

   Establishes a solid security foundation that enhances compliance with laws and industry regulations.

2. **Efficient Data Management**

   Streamlines data management with powerful automation tools, reducing manual effort and improving operational efficiency.

3. **Cost-Effective Implementation**

   Uses your existing IT infrastructure effectively, minimising additional expenditures while maximising data protection capabilities

4. **Advanced Compliance**

   Use new capabilities, such as simulation modes for sensitivity labelling and auto-application of retention labels, which can simplify compliance and governance processes.

5. **Secure Data in AI Environments**

   Use Microsoft Purview to help secure data used in AI applications, including generative AI tools.
