

Name: UNIFY Zero Trust Security Platform

Description:

UNIFY Solutions holds Advanced Specialisations in Security for Threat Protection, Cloud Security, and Information Protection and Governance. UNIFY's **Zero Trust Security Platform** helps defend organizations against cyberattack and crippling data breaches and has been built based on Zero Trust Principles. UNIFY's highly skilled cybersecurity team detects, assesses, and responds to threats and incidents and ensures organisational safety.

UNIFY provides a Security Operation Centre as a Managed Security Service Provider (MSSP) through the Zero Trust Security Platform, which includes the following:

- UNIFY's Zero Trust Security Platform allows organisations to *Identify, Protect, Detect and Respond* to Cybersecurity threats. This helps in improving organisations security posture and provides *visibility and control* against their evolving threat landscape. This platform is utilised as a comprehensive **Managed Security Service Offering** that delivers Managed Detection and Response Services to our customers
- UNIFY's comprehensive Zero Trust Security Platform underpins the Managed Security Service Offering enabling Managed Detection and Response Services to our customers. The offering provides 24x7 Managed Security Service leveraging Microsoft cloud technology with dedicated skilled and experienced team focusing on real-time monitoring and analysis.
- The UNIFY Automation Engine provides the elements of security orchestration, automation, and response. UNIFY automates any recurring and predictable enhancements, responses, and remediation tasks – allowing the team to focus on more in-depth investigation, incident response and threat hunting activities.
- UNIFY's Zero Trust Security Platform based Managed Security Service offering is aligned with the National Institute of Standards and Technology (NIST) Cybersecurity Framework to manage cybersecurity-related risks to Identify, Protect, Detect and Respond to cyber security threats.
- UNIFY's solution is Information Security Registered Assessor Program (IRAP) validated and aligned with ISO 27001 for risk management. Being assessed at the PROTECTED level helps validate that UNIFY's security controls are effective for storing, processing, and communicating information up to the PROTECTED information classification level.
- UNIFY's highly skilled cybersecurity team; leveraging enterprise-class technologies from Microsoft, supports and protects organisations identities, data, applications and devices at a global scale- end-to-end and in real-time.

UNIFY's Zero Trust Security Platform is designed to address the complexities of the modern world that embraces the mobile workforce, people, devices, applications and data. This, in turn, allows our team to find and detect threats, respond to, and prevent any undesired actions across your organisation more easily.

UNIFY's offering and services saves you money, improves your organisation's security posture, assist in meeting your security and compliance requirements and maximises the efficiency and investment in your existing Microsoft products and services, thus protecting your business operations.
