Enhance Teams for Productivity
Productivity Assessment + POC

Help your employees get the most from Teams

As the hub for teamwork, Microsoft Teams is designed to help organizations improve collaboration and increase efficiency by centralizing day-to-day work tools and automating key business processes. With our initiative, we intend to identify the current state of productivity in the organization, create a roadmap to implement the centralizing hub and implement a Proof of Concept (POC) for one productivity solution to illustrate the concept.

Did you know?

"72% of business executives say productivity has increased through empowering frontline employees."

Harvard Business Review, 2020

CHALLENGES

The current hybrid work model presents challenges to employees. They need to be able to be productive anywhere.

Employees waste time, for example, transitioning between dispersed work tools, in non-streamlined processes, searching for information and managing e-mails.

IDEAL SOLUTION

Aggregation of the employee's day-to-day work tools in a single channel (Teams Hub), where the employee can perform their tasks without wasting time in the transition between tools.

This channel may consist of customized solutions for Teams and solutions based on Microsoft Power Platform.

DESIRED OUTCOMES

- With our initiative, we intend to identify the current state of productivity in the organization, create a roadmap to implement the centralizing hub and implement a POC to illustrate the concept.
- Implementation of a change management service to drive adoption of the solution.
