uni.systems

Modern Data Warehouse

Centralize business information and make it available for Analytics and Reporting with the power of Microsoft's Azure.

UniSystems "*Data ecosystem Modernization offering***"**
combined with Microsoft's Azure Services enables you to overcome issues of legacy databases and accelerate performance.

Overcome issues of legacy databases using **UniSystems Data Platform services build on Azure**, elevate on performance and stability, improve security, utilize new data exploration capabilities while at the same time establish and assure operational costs and capital expenditures efficiency.

Why modernize data platforms?

- ***Make faster and better decisions*** with Industry leading performance, transformational insights with data integrity

- ***Increase Availability*** of mission critical intelligent applications, data warehouses and data lakes

- ***Advanced security features*** enable you to control unauthorized access of your private data and protect data at rest and data in use

- ***Data Engineers with strong data management experience*** and a proven track-record

Why

Improve, Achieve, Establish…

- Lower TCO,
- Security & Compliance,
- Advanced threat detection,
- Enterprise scaling at the touch of a slider,
- HA & DR built in,
- Operational agility; No more patch management; Backups; Hardware upgrades.

What

Move, Host, Process and Explore any Data Source from any location using…

- Azure Data Factory,
- Azure Analysis Server,
- Azure Synapse,
- Azure Machine Learning,
- Azure Data Lake services,
- Azure Databricks
- Azure SQL Server.

How

Offered by Experts under a form of services…

- Discover & Assess,
- Plan & Design,
- Build & POC,
- Migrate & Test,
- Performance & Security,
- Manage and Maintain.

"95% of enterprises are using cloud computing in some form, with 67% of enterprises leveraging hybrid cloud"
