

UDT Microsoft Defender Security Workshop

Discover how Microsoft Defender protects the entire attack surface before the attack ever happens.

The UDT Microsoft Defender Workshop is a security envisioning engagement designed to assess security readiness and align security strategy with Microsoft's FY26 Securing the Cyber Foundation priority. Through collaborative discovery, UDT helps customers understand their threat exposure, security gaps, and how Microsoft Defender delivers unified, AI powered protection across endpoints, identities, cloud workloads, and email.

Workshop Focus Areas

- Modern endpoint protection with Microsoft Defender for Endpoint across all operating systems.
- Email and collaboration threat protection using Microsoft Defender for Office 365.
- Identity based attack detection and prevention with Microsoft Defender for Identity.
- Cloud workload and AI platform protection through Microsoft Defender for Cloud.
- Proactive risk reduction using Microsoft Defender Vulnerability Management.
- Unified security operations through the Microsoft 365 Security portal and optional Sentinel integration.

UDT's Security & Compliance Focus

- Comprehensive, Unified Security Assessment Across the Full Attack Surface
- Security-First Strategy Aligned to Microsoft Best Practices and Compliance Priorities
- Actionable Roadmap to Reduce Risk and Strengthen Security Operations

Workshop Structure

- Security posture review across endpoints, identities, email, and cloud environments.
- Threat landscape and attack surface analysis mapped to real world scenarios.
- Demonstration of Microsoft Defender capabilities and automated investigations.
- Discussion of deployment readiness, licensing options, and roadmap alignment.
- High level Defender adoption plan aligned to Microsoft Secure Future Initiative

Key Outcomes of UDT's Microsoft Defender Security Workshop

Increased readiness for Defender deployment or expansion discussions

Clear understanding of current security posture and gaps

Defined Microsoft Defender deployment and adoption roadmap

Alignment between security, IT, and business stakeholders

This workshop empowers customers to clearly understand their security risks, modernization opportunities, and the value of a unified Microsoft Defender approach before making implementation decisions.

By translating complex security challenges into actionable insights and a clear adoption roadmap, UDT accelerates confidence, alignment, and decision making across technical and business stakeholders.

Customers leave with clarity on how Microsoft Defender reduces risk, improves resilience, and simplifies security operations, positioning them to make informed investments that strengthen their cyber foundation and support long term security modernization.

Change Enablement & Training

UDT provides technical change management training for IT administrators and support teams, including hands-on demos, operations documentation, and day to day change planning. This ensures your organization builds the skills and confidence required for a secure and sustainable digital workplace transformation.
