

An Automated Self-Service Planning & Migration Tool, Enabling Accelerated Migration From Legacy PBX To Cloud PBX

Highlights

- A Self-Service intuitive SaaS system
- A phased migration approach to enable coexistence of legacy PBX and cloud PBX
- No legacy PBX expertise required
- Detailed migration path and feature configuration down to the extension level
- Number normalization rules
- Planning & Provisioning validations for quality assurance
- Migration project progress monitoring
- A Step by Step migration automation methodology

Project Monitoring

Migration Service Coverage

- **Devices:** Stations & Attendant Consoles
- **Groups:** Hunt Groups, Pickup Groups, Coverage Answer, Intercom Groups, Trunk Groups, Page Groups, Call Parks
- **Phone Types:** IP phones, common area phones, analog phones, Conference rooms
- **Supported Legacy PBX's:** Avaya, Cisco, Mitel, Siemens, Nortel. Support for additional PBX models will be reviewed on request

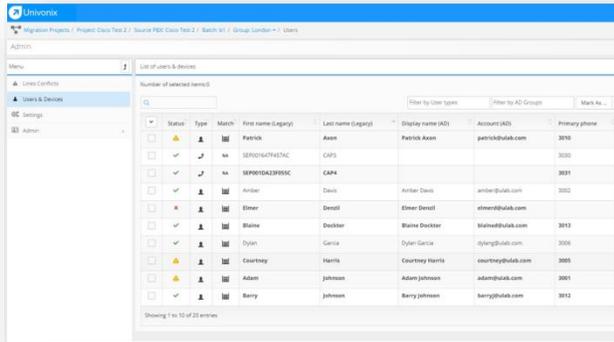

Univonix PBX 'Planner' & 'Migrate' are a Self-Service intuitive SaaS solution that offers System Integrators, Service Providers, Solution Vendors and customers an automated platform that enables a smooth transformation from a legacy PBX to Cloud PBX. Using a phased migration methodology 'Planner' helps build the configuration for your target system. The 'Migrate' module executes the migration plan, by provisioning the target PBX as well as the source PBX to enable coexistence during the migration project.

An effective migration plan is crucial for project success. 'Planner' will surface issues, conflicts and dependencies down to the extension level, and will monitor the progress of issues resolution. 'Planner' will run a full set of validation tests to assure the new configuration solves issues such as: feature parity, licensing, phone number normalization and more. These validations will save you extensive time and resources when provisioning the new system, leading to a frictionless end user adoption experience. Planning done within the Univonix service does not require legacy PBX expertise. The service will not interfere with your customers production phone system.

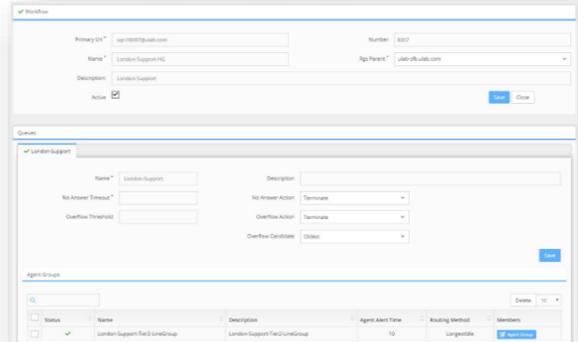

Provisioning to the target cloud PBX is executed by the 'Migrate' module. Prior to the provisioning of any group of users the system automatically validates that the required licenses are available, the correct phone numbers were ported and more. In addition, the system can automatically generate configuration for the legacy PBX to support co-existence.

'Planner & Migrate' are most effective in the following scenarios:

- **Large Enterprises:** over 1000 extensions
- **Multiple PBX Environments:** several PBX's, same or different types
- **Coexistence:** legacy PBX is still required
- **Mergers & Acquisitions:** consolidating users to one cloud platform

Users & Devices Web Interface

Hunt Group Web Interface

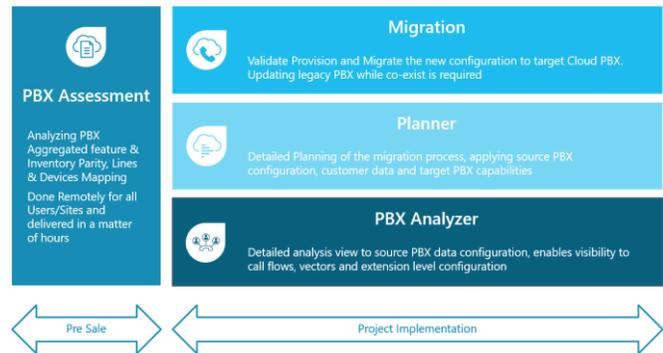

Available Customizations

- “White Labeling” – Partners, Vendors, System Integrators and Service Providers can customize and brand the look & feel
- Additional reports or integrations with external data sources can be added based on specific requirements
- Integration with external systems are possible based on web service APIs

Note: ‘Planner’ can be utilized separately while ‘Migrate’ is an add-on to ‘Planner’

Univonix ‘Planner & Migrate’ are part of a suite of services that will automate and optimize your path to voice migration from Legacy PBX to cloud PBX.

All services can be purchased independently, except Univonix Migrate which is an add-on to Univonix Planner.
