

Assessing, Analyzing and Mapping the full configuration of the source PBX environment based on target cloud PBX capabilities

Highlights

- A Self-Service SaaS system
- Full visibility to PBX configuration
- Automatic report generated in hours; no manual work required
- Word format document that can be configured to different views.
- Enables a feature discussion based on actual facts and not estimations
- Reduce migration Scoping Risk
- Gain competitive advantage

Report Coverage

- Summary of users, extensions & devices
- Summary of users ready to be migrated based on **Target Feature Parity**
- Aggregated migration readiness status
- Devices hardware mapping and BOM (Bill of Material)
- Color coding to reflect readiness Level
- Glossary of equivalent terms – Source vs Target

Univonix PBX Assessment™ is a patent pending SaaS solution. The solution offers System Integrators, Service Providers and customers a fully automated assessment platform to discover the unknowns in a voice migration project.

A PBX Assessment report can be and should be done in a preliminary phase of the decision if and to what cloud platform should I migrate to. Running the assessment does not require any interference to the users or IT departments routine, it is performed in the Univonix Cloud after the configuration is uploaded based on Univonix guidelines.

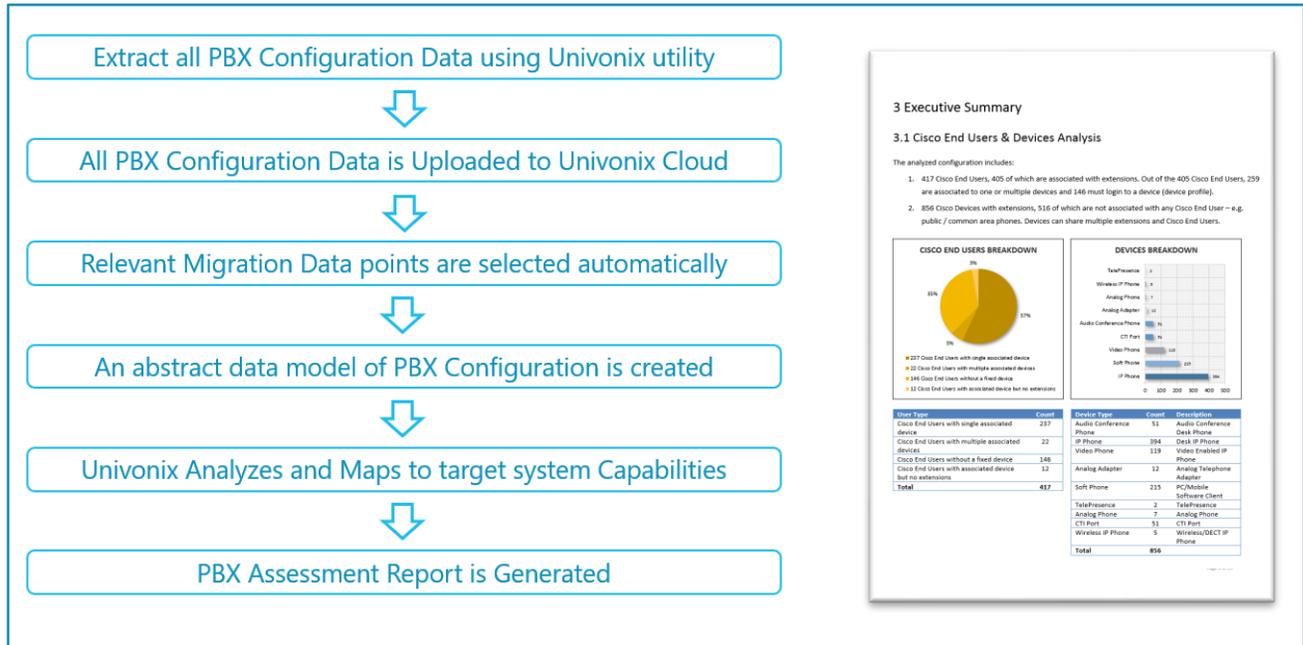

Our expertise is in the integration of the data from the source PBX and matching it to the functionality of the target Cloud PBX. The end result is an aggregated view of possible conflicts, issues and other implications for the migration process.

The report can be used for the following scenarios:

- **Pre-Sale** – Have a meaningful discussion based on actual data. without having to rely on estimations or “guestimations”, the truth is in the PBX data.
- **Migration cost estimation** – The report will specify what can be migrated automatically and what will require manual involvement
- **Migration challenges outlook** - the ability to know in the early stage where the migration hurdles will be and address them specifically
- **Platform for executive discussion** – Executives requires high level aggregated view of what the situation is and what can be done with it.
- **Devices BOM** – A critical aspect of evaluating a migration project is receiving the Bill of Material of the devices in place, which should be replaced and what is been used by employee profile.

How is the PBX Assessment Report generated?

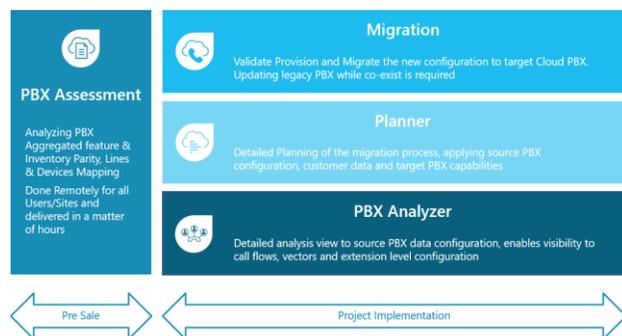

What else can you do with Univonix PBX Assessment™ report?

- Specific data sets that has unique value within the legacy PBX can be analyzed per request
- Univonix enables multiple reports per PBX assuming different target systems
- The PBX Assessment report can be utilized as a “White Labeled” report
- System Integrators and Service Providers that utilize many reports will have admin privileges to manage reports and Internal Users.

Univonix PBX Assessment™ is part of a full migration solution system that will automatize and optimize your path to voice migration from Legacy PBX to cloud PBX.

Once the PBX Assessment is used the next steps will be utilizing Univonix Analyzer, Univonix Planner and Univonix Migrate.
