

Do you know who is trying to access your services?
Do you know where your platforms are sending data to?
Do you want to easily manage policy to control access to/from your network?

UNpkl

provides **A Live Data Cam**
for your **Privacy and Security**

Our all-in-one package Access and Security Management solution offers:

- Visibility – What connections are established in your network
- Transparency – What sources are sending requests to your platform
- Control – What sources should have access to what destinations at what time
- Insight – How users and services are accessing your platform
- Ownership – Write back all your connection data to your endpoint
- Management – Manage access and enforce policy at scale with ease

Adoption is simple:

Step 1: Download UNpkl vm package

Step 2: Download UNpkl web/mobile app

Step 3: Start monitoring data traffic in your network with UNpkl app or REST API

Step 4: Configure policy, block and unblock, tag and share

Step 5: Manage your network connections at scale, group sources and destinations, apply policies

You can also extend UNpkl capabilities from virtual platform to your physical devices with UNpkl hardware.
