

BreachSight Product Datasheet

The cloud has changed cybersecurity. Rapid cloud adoption is now the norm, as organizations move at the speed of digital transformation. The UpGuard platform empowers cloud-enabled organizations to proactively mitigate cybersecurity risks and securely operate in an evolving threat environment. By continuously monitoring your organization's security posture, UpGuard BreachSight arms your people with insights to identify, assess, and remediate cybersecurity risks.

What is BreachSight?

UpGuard BreachSight monitors your attack surface, prevents data breaches, discovers leaked credentials, and protects your data.

Instantly understand your security posture

BreachSight is an attack surface management platform that helps you continuously monitor your organization and subsidiaries. Instantly assess your total security posture with easy-to-understand, always up-to-date security ratings.

Continuously monitor your entire attack surface

Improve your security and find leaked employee credentials exposed to the public internet, typosquatted domains and software vulnerabilities. Continuously monitor your organization's entire IP address footprint and immediately take action to prevent breaches.

Use data to drive your remediation process

Simplify and accelerate your remediation process by using real-time data about identified risks. Use powerful workflows to track progress and know exactly when issues are fixed. Using UpGuard means less email, fewer spreadsheets, and more time to focus on improving your security posture.

At a glance

- ✓ Monitor your entire attack surface continuously to improve your security posture.
- ✓ Board-level reporting of your organization's security rating to drive executive awareness.
- ✓ Benchmark your security against your industry peers to stay ahead of the pack.

“By automating cyber risk detection and assessment, UpGuard has helped increase our cybersecurity performance, while getting efficiency through automation.”

Thomas McCosker
Head of IT, Taylor Fry

Key features and benefits

- Executive reporting**

Create up-to-date reports on your security posture to identify the issues that pose the highest risk and how to improve your security posture.
- Monitor your risk profile**

Instantly understand your risk profile and security posture with always-up-to-date security ratings.
- Automated identity breach detection**

Get notified of leaked employee credentials before their accounts are compromised.
- Industry benchmarking**

Compare your security posture against industry peers to prioritize your security efforts.
- Vulnerability detection, assessment, and management**

Discover vulnerabilities that may be exploitable in the software running on your websites.
- Typosquatting**

Monitor and identify permutations of your domains that are at risk of typosquatting.

We're processing over 800 billion data points each day and are directly responsible for securing over 1.9 billion records.

UpGuard is a cybersecurity platform that helps global companies prevent data breaches, monitor third-party vendors, and improve their security posture. Through proprietary security ratings, world class data leak detection capabilities and powerful remediation workflows, we proactively identify security exposures for companies.
