

Executive Overview

An all-in-one attack surface and third-party risk management solution.

UpGuard is an all-in-one attack surface and third-party risk management solution.

UpGuard is a cybersecurity platform that helps global organizations prevent data breaches, monitor third-party vendors, and improve their security posture. Using proprietary security ratings, world-class data leak detection capabilities, and powerful remediation workflows, we proactively identify security exposures for companies of all sizes.

By scanning millions of companies and billions of data points each day for security issues and misconfigurations, UpGuard helps you improve your security posture and monitor your vendors, reducing your third-party and fourth-party risks.

800bn+

Evaluations per day

1.9bn+

What our customers are saying

We have many cloud-first vendors so the UpGuard platform allows us to be granular and gives us an interesting layered insight on our supply chain that could have a critical impact on our operation.

Andrew Lawrence

CIO, Superloop

By automating risk detection and assessment, UpGuard has helped increase our cybersecurity performance, while getting efficiency through automation.

Thomas McCosker

Head of IT, Taylor Fry

UpGuard has given us a view of our vendor security posture. The ability to launch a questionnaire or ask for a plan of remediation for items that show as vulnerable is also a great added value.

What makes UpGuard different?

First, third and fourth-party executive reporting

Generate executive-level risk reporting on your entire security posture at any time, including third and fourth parties. Use metrics that your executive team and board can understand to see your security posture.

Security ratings

Assess and benchmark the posture of your own organization and your third-party vendors. Unlike some providers that take 3-4 weeks to monitor a new vendor, our platform rates over 10 million companies every day.

Data leak detection

Track, identify and detect data that your organization might be leaking, from exposed credentials and datasets to employee and financial data. Our analysts will help close any identified data leaks.

Security questionnaires

Send vendor security questionnaires from an extensive library of templates that map to frameworks including ISO 27001, CPS 234 and NIST Cybersecurity Framework. Keep an audit trail and eliminate email back-and-forth.

Managed vendor assessments

Relieve the burden of running your third-party risk management program with our team of expert third-party risk analysts with our flexible managed services. We can just manage your critical vendors, or fully manage the TPRM process for all your vendors.

Vulnerability detection and management

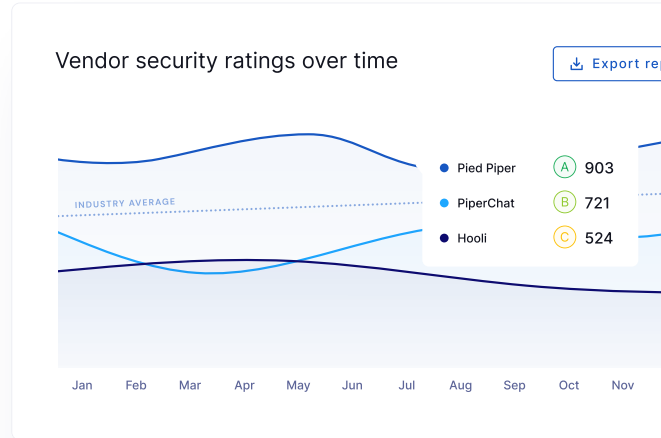

Discover and assess known vulnerabilities. Request remediation of verified and unverified vulnerabilities in first and third-party remediation workflows.

Our products

UpGuard Vendor Risk

Third-party risk management

UpGuard Vendor Risk continuously monitors your vendors, automates security questionnaires, and reduces third and fourth-party risk.

UpGuard BreachSight

Attack surface management

UpGuard BreachSight monitors your attack surface, prevents data breaches, discovers leaked credentials, and protects customer data.

Current risk profile

Finding	Risk	Category	Domains at risk
!!! SSL not available	Critical	Website risks	12 / 24 domains
globalbank.com	A 721	10 risks identified	Request remediation
globalbank.co.uk	C 560	18 risks identified	Request remediation

SSL is the standard encryption method for browsing websites. Enabling SSL requires installing an SSL certificate.

UpGuard CyberResearch

Managed security services

UpGuard CyberResearch scales your third-party risk program, and continuously monitors your organization and your vendors for data leaks.
