Powering Your Business with Microsoft Dynamics
365 and Power Platform

We specialize in providing comprehensive solutions using Microsoft Dynamics 365, Power Platform

Unleashing Potential: Innovate, Elevate, Scale

Power Pages Rapid PoC

Proof of Concept (POC) is a great way to understand the practical potential of solutions before implementing them on a larger scale.

Why do a PoC?

- Speed and Efficiency: We specialize in rapid POC deployment, allowing you to visualize and quickly assess potential benefits within your operations. Time is valuable, and we ensure it's not wasted.
- Expert-Led POC: Our team, led by multiple Microsoft MVPs, steers the POC process. You can count on us for the industry's best practices, high-quality results, and maximized insights.
- Tailored For You: Each POC is tailored to meet your unique business challenges and needs. We strive to provide a realistic representation of how a comprehensive solution would operate in your environment.
- Valuable Feedback: Your opinions matter. We take the time to gather your feedback and evaluate the POC's success. This valuable insight allows us to refine and perfect potential solutions for full-scale deployment.
- The Journey Ahead: A POC is just the first step. Whether we're refining your solution, planning for full-scale deployment, or exploring other avenues, we're with you every step of the way.

How Long is a POC?

We believe 6 weeks is the ideal Duration to prove a Concept

How is 6 week Broken down

1 Week Planning.
2 Sprint of 2 weeks each for build
1 Week to deploy and test

When do I see what is being built:

We believe in Rapid Feedback; Our Team will do a Product demo at the end of each Sprint to show progress as well as validate the solution and do any course correction.

Where will the PoC be deployed?

PoC will be deployed in a Higher Environment (UAT/Test)

What all technology the PoC will entail

Power Pages built on Dataverse (Model Driven App or Dynamics 365)

Our Rapid PoC is designed to demonstrate the functionality, feasibility, and potential benefits of a full-scale deployment in a real-world context.
