InfoPath to SharePoint/Power Apps Migration tool – 2 weeks Assessment

UST has developed a tool that allows you to easily generate inventory reports from InfoPath Form Libraries and migrate them to SharePoint Lists. You can, therefore, assemble a Microsoft PowerApps/Power Automate solution.

The 2 weeks assessment driven by UST's Microsoft-certified squad takes you through an evaluation matrix to showcase Power Apps, Power Automate, and Power BI capabilities. Our end goal is to assist companies further accelerate their digital transformation journey using low-code no-code platforms

Highlights

1. Discussion with UST's Power Apps Consulting team for InfoPath to Power Apps migration assessment and understand the customer's current layout

2. 2 weeks of Detailed Discovery Phase includes:

    a. Understand the current InfoPath layout and decide on the migration strategy and plan for moving to the Power Platform.

    b. Discover the data volume, number of forms, and complexity to prepare the migration plan by using the discovery tool.

    c. The license options for alternate solutions will be evaluated, and a budget breakdown of the alternatives will be provided.

    d. Security and Compliance needs related to business needs shall be addressed.

    e. The checklist will outline how to develop, deploy, and maintain PowerApps based on your business needs.

    f. A detailed description of the migration effort, documentation, and the implementation timeline will be provided.
