

# CyberProof Threat Exposure Management with co-managed cybersecurity services

Fortify your cybersecurity strategy and  
defense readiness with threat  
exposure management.

## Problem statement

Many large enterprises often struggle to manage risk across the constantly evolving threat landscape, especially when using siloed security controls and tools to meet compliance demands and address attack surface coverage.

Alongside this, security defenses frequently fall behind in updating detection and response techniques as threats evolve, resulting in security gaps, reduced visibility into control effectiveness, and difficulties in prioritizing investments and proving ROI.

As threats evolve, existing security defenses can lag in updating detection and response techniques, addressing key exposures to attacks and protecting critical systems resulting in unacceptable risks to the organization. There are simply not enough resources to address all the potential risks.

## Solution

CyberProof, powered by Interpres Security™, offers a continuous, custom threat exposure management (TEM) solution that provides a comprehensive view into organization threat exposure and defense readiness - within minutes.

As new threat actors and tactics emerge, automated threat exposure and gap analysis is critical to maintaining real-time visibility into the cybersecurity ecosystem. With CyberProof, enterprises can now receive quantifiable data and targeted recommendations to close security gaps and develop detection and response strategy adapted to the ever-changing threat landscape.

CyberProof offers a continuous, custom threat exposure assessment service that provides a comprehensive view into organization threat exposure and defense readiness - within minutes.

(For qualified customers only.)

## What we do differently?

CyberProof believes that enterprises must focus their limited resources on threats that matter to them, address key exposures and improve their defense posture to ensure clear reduction of risk, especially where fast evolving and disruptive attacks are involved.

Our solution provides a continuous view of exposures and required changes in your defense posture required to reduce risk of attack. CyberProof, powered by Interpres, is the only cybersecurity services company that provides a continuous and integrated approach between attack surface and threat defense management.

## What we do?

CyberProof has integrated its attack surface management (ASM) and TEM with some of the following services:

Managed  
Detection and  
Response (MDR)

Use Case  
Management

Vulnerability  
Management

Advanced Threat  
Hunting

Penetration  
Testing

You can find the complete list of services here: <https://www.cyberproof.com/security-services/>

## Benefits of TEM

- ✓ Identify the threats most likely to target your organization.
- ✓ Baseline your current exposure and assess your organization's cyber defense readiness.
- ✓ Prioritize exploitable vulnerabilities being leveraged by adversaries that target organizations like yours.
- ✓ Ensure your detective and preventive controls match the threats and vulnerabilities that matter the most.
- ✓ Identify coverage gaps.
- ✓ Get tailored recommended improvements to optimize your security stack.

Contact CyberProof via the "Contact Me" button or register here <https://www.cyberproof.com/threat-exposure-assessment/>

## Package 1

### Attack-Defense Assessment

This assessment uses customized cyber threat intelligence and static input from your security tools, together with a 30-day solution license between attack surface and threat defense management.

#### Benefits

- ✓ Custom threat profile using advanced cyber threat intelligence (CTI) technologies and services.
- ✓ Demonstrate TEM's capabilities to continuously assess security posture against threat actors, their campaigns, their tactics and techniques.
- ✓ Provide remediation recommendations for security posture, using TEM's knowledge base and CyberProof Use Case catalog.

#### Deliverables

- ✓ CyberProof will use data from industry-leading threat intelligence sources and TEM to develop your organization's threat profile, personalized for your industry vertical and geographic locations.
- ✓ CyberProof will provide a TEM solution instance to examine the relationship between threat actor and your notional defense and exposure gaps.
- ✓ CyberProof will generate a personalized threat profile report for your organization.

#### Timeline

The entire process, including assessment review meeting, should take a week or less under optimal conditions. The TEM solution instance will be provided for up to thirty days.

#### Pricing

USD 5000

(This services fee can be applied to the cost of one of the following two packages .)

## Package 2

### CyberProof Threat Exposure Management (TEM)

This is an annual license. Connect your TEM instance with read-only APIs to your SIEM, EDR, Vulnerability Scanner and Active Directory (at minimum).

#### Benefits

- ✓ Receive a continuous view of your exposure and defense gaps.
- ✓ CyberProof Customer Success supports your adoption of the TEM solution.

#### Optional additional related services

- CyberProof Threat Intelligence teams continuously interpret and update threat intelligence information including threat actors, their active campaigns and their tactics and techniques.
- CyberProof Use Case Management service continuously delivers new detection rules, playbooks and automations to improve your defensive capabilities.
- CyberProof offers expert help to advise on remediation plans to improve your security posture and maturity.
- CyberProof will conduct an analysis and develop a strategic security content plan, detailing use cases to implement based on the security posture, log collection architecture, and optimization of ingestion and processing. Deliverables include a security budget optimization plan and an optimized security logs architecture.

#### Deliverables

- ✓ CyberProof will work with your team to connect uni-directional read-only APIs between your security solutions and the TEM platform. Minimum requirements: SIEM, EDR, Vulnerability Management and Azure AD. Note: Out-the-box API connectors are defined in <https://docs.interpres.io/integrations>. For custom API connectors, please discuss with CyberProof.
- ✓ CyberProof will guide your team to analyze and develop a strategic security gap analysis and remediation plan.
- ✓ Additional deliverables are based on the optional additional services purchased.

(This services fee can be applied to the cost of one of the following two packages .)

#### Timeline

This package is a platform service with annual subscription and discounts for longer plans. For a different time duration, please discuss with CyberProof. The annual services price varies based on the number of assets and endpoints monitored.

#### Pricing

Please discuss pricing with CyberProof.

(This services fee can be applied to the cost of the following package.)

## Package 3

### CyberProof TEM with Defense Readiness

The TEM solution helps CyberProof deliver a measurable outcome unlike any other service provider. It also helps us define ways to work together more effectively in a flexible way to provide advanced cybersecurity managed services that fit your needs, your priorities and your budget.

#### Benefits

This package provides all the benefits of the TEM package above, as well as the benefits of the additional complementary cybersecurity managed services that you choose.

CyberProof's TEM solution is easily combined with complementary cybersecurity managed services to reduce your security gaps and ensure optimal continuous security posture.

Complementary services include:

- ✓ TEM helps define security priorities and next steps to reduce security gaps and harden security posture. Read more about CyberProof's managed services here: <https://www.cyberproof.com/security-services/>
- ✓ CyberProof's Managed Detection and Response (MDR) service supports organizations with security incident expertise, visibility, and control. Read more about CyberProof's MDR services here: <https://www.cyberproof.com/security-services/managed-detection-response/>
- ✓ CyberProof's Use Case Management service helps clients define their roadmap based on TEM analysis, design custom detection and response solutions, and deploy use cases and remediation measures, to strengthen your security stance. Read more about CyberProof's Use Case Management services here: <https://www.cyberproof.com/security-services/use-case-engineering/>
- ✓ CyberProof's Vulnerability Management service complements the TEM solution to proactively identify, assess, prioritize, and address vulnerabilities with regular scans that detect weaknesses in software, configurations, and network infrastructure. Read more about CyberProof's Vulnerability Management services here: <https://www.cyberproof.com/security-services/vulnerability-management/>
- ✓ CyberProof's advanced Threat Hunting services provide enhanced visibility and proactive defense to hunt for threats that may have evaded your other defences, with hunting plans that are continuous and tailored to your organization. Read more about CyberProof's advanced Threat Hunting services here: <https://www.cyberproof.com/security-services/advanced-threat-hunting/>

#### Deliverables

All the deliverables of the continuous threat exposure management package above, as well as additional service deliverables depending on the complementary service offerings purchased.

#### Timeline

This package is a platform service with annual subscription and discounts for longer plans. For a different time duration, please discuss with CyberProof.

#### Pricing

Please discuss with CyberProof.

## Why CyberProof

As a UST company, CyberProof supports enterprises by keeping them safe and secure from cyberattacks as they migrate to cloud-native environments. Using a groundbreaking combination of virtual analysts, expert human analysts, and automations, CyberProof supports, extends, and continually optimizes your cybersecurity operations while collaborating with your security team and critical stakeholders in real time.

Safe in the knowledge that your data is now fully protected, you can focus on achieving your critical business objectives and become the global entity you are meant to be: agile, adaptive, and innovative. Learn more at [www.cyberproof.com](http://www.cyberproof.com).
