

Continuous Threat Defense Self-Assessment For Enterprise Organizations

Benchmark your threat exposure and optimize defenses with a threat exposure and defense controls assessment.

The challenge

Cyber-attacks have become a critical threat to enterprises across all industries, leading to operational disruptions that jeopardize essential business functions and expose organizations to significant financial and reputational risks. Many businesses struggle to manage risks within a rapidly evolving threat landscape, often relying on fragmented security solutions that complicate compliance with data protection regulations and create blind spots in their security posture.

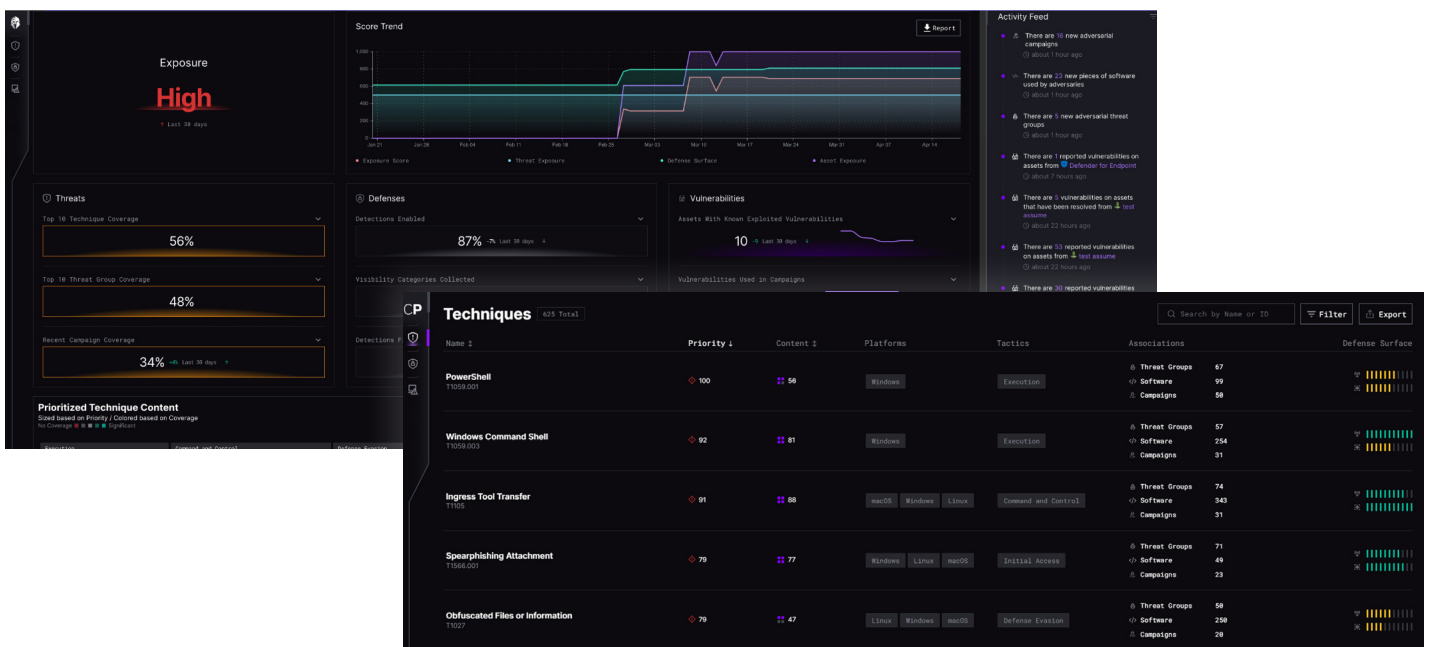

As cyber threats continue to evolve, existing security defenses often fall behind in updating detection and response capabilities, leading to vulnerabilities, limited visibility into control effectiveness, and difficulties in justifying security investments, especially with key stakeholders.

From 2010 to 2024, millions of records were compromised across various industries, with cyberattacks such as ransomware, data breaches, and advanced persistent threats increasing in frequency and sophistication. Enterprises across all sectors have become prime targets, with industries like finance, healthcare, and manufacturing facing specific challenges in securing sensitive data. The sector's complex and evolving attack surface—characterized by legacy IT systems, interconnected networks, and extensive third-party vendor ecosystems—poses significant challenges in effectively managing security. Additionally, businesses across industries have faced increasing regulatory fines, with penalties for non-compliance and cybersecurity failures reaching billions of dollars globally in recent years. So, what's the solution?

The solution

CyberProof has partnered with Interpres Security to deliver a tailored Defense Readiness Self-Assessment that provides a continuous threat and exposure management (CTEM) view of organizations, evaluating their defense readiness in just minutes.

As new threat actors and tactics emerge, automated threat exposure and gap analysis become essential for maintaining real-time visibility into the cybersecurity ecosystem. Together, CyberProof and Interpres Security enable organizations across all industries to receive quantifiable data and targeted recommendations for closing security gaps and developing adaptive detection and response strategies that are aligned with the ever-changing threat landscape.

Business and security outcomes

With the Defense Readiness Self-Assessment, you can:

- ✓ Identify the most significant threats likely to target your organization.
- ✓ Establish a baseline for your current risk exposure and assess your organization’s cyber defense readiness.
- ✓ Prioritize exploitable vulnerabilities that adversaries are leveraging against businesses like yours.
- ✓ Ensure your detection and prevention controls are aligned with the most critical threats and vulnerabilities.
- ✓ Continuously update detection rules and playbooks to reflect relevant business use cases.
- ✓ Identify coverage gaps in your security posture against industry standards and best practices.
- ✓ Receive tailored recommendations to optimize and enhance your overall security framework.
