

Valcon Profisee DevOps Accelerator

Azure DevOps accelerator to help automate Profisee deployments

Our accelerator provides an Azure DevOps pipeline and associated script templates that will automatically execute the Profisee import and export routines to move configuration, code and data between environments.

It will export configuration from your development environment, check it in to your GitHub repository and allow users to raise Pull requests to promote all the latest changes and import the configuration to either your test or production environments.

It will allow a user to select which type of artefacts need to be deployed e.g., forms, views etc and covers deployment of any Azure functions associated with your Profisee solution that are called by Profisee webhooks.

It uses Azure DevOps pipelines functionality to allow deployments to be approved prior to execution and uses parameters to hold the specific details of each environment.

The templates can be used for IaaS, PaaS and SaaS instances of Profisee using DevOps self-hosted agents.

For this price you will get our templates and 2 days of consultancy to help you configure them for your environment. Additional consultancy days can also be purchased if required.

This offer is only available to end user organisations, once you have the templates deployed you are free to customise them as you wish and therefore when you have taken ownership of the templates Valcon will no longer offer free support.

We also have other Profisee accelerators available that can be used to accelerator your Profisee implementation – see accelerators slide.

Available Valcon Profisee Accelerators

Full Regular Expression Validation Plug-in

Allows complete Regex Matching Validation not available out of the Box. Ideal for checking formats of IDs, Codes and Email Addresses

International Phone Format Validation Plug-in

Our telephone validation checks to see if the telephone number format is valid for the country. It also returns the international dialling prefix

Enhanced GBG Address Verification Plug-in

Our enhanced GBG Address Verification Plug-in returns all data from GBG including UDPRN and allows complete flexibility on address validation

Salacious Words Removal

We can identify and remove Salacious works for most European languages

Dynamics 365 Lookup before Create Plugin

Our Dynamics 365 Custom Plug-in template checks to see if the record being created already exists in Profisee and Synchronise changes from Dynamics 365 to Profisee in near real-time

Experian Address Verification & Lookup Plugin

Takes advantage of the Experian Address Verification and Lookup services to provide address verification and accurate address capturing.

Extensible Data Model

We have a "ready-to-go" extensible data model that allows attributes to be added on-the-fly based on entity categories. Ideal for product/asset use cases

Profisee Staging Lineage Plugin

Our Purview plugin creates and syncs column level lineage between Profisee Staging tables and Profisee Entities in Purview

Enhanced Staging Error Reporting Plugin

Our Staging Error plugin reports additional information on issues found when loading data into Profisee via Staging tables

Chat GPT Plugin

Unleash the power of GPT in Profisee! Our plug-in integrates GPT into the heart of Profisee - from generating suggested Product descriptions to cleansing your data with AI!

Email Address Cleansing

Our Email Address Cleansing plug-in corrects email addresses that have been entered incorrectly.

Nickname Matching

Matching Bill Withers with William Withers! We have Nick Name data sets for most European countries.

GBG Address Lookup Plug-in

The Address Lookup allows users to enter part of an address and select an address from the suggested addresses list

DEVOPS Continuous Deployment

A framework to integrate the Profisee deployment process into an existing or new CI/CD pipeline

Enhanced Company Name Matching

We use a standard set of Synonyms to enhance matching for International Addresses and Company Names

Companies House API Plugin

Our companies house plug-in enriches UK company data using companies house including updating out-of-date addresses!

Multi-lingual Enhancements

Enhance the Fast Apps Portal to show labels and dropdowns in different languages based on the current user.
