

AZURE OPTIMIZATION ACCELERATOR

IT Modernization

CLOUD OPTIMIZATION – OUR PERSPECTIVE

Across our portfolio of clients, we've continued to see Cloud Optimization as one of the primary challenges and barriers to cloud adoption at scale. Organizations struggle to control costs and implement governance models that support business operations while maintaining control. While most realize that governance is a necessary aspect of a business platform, few invest the time and effort to make it a foundational component of their cloud journey. Accordingly, many organizations are now struggling with a poorly optimized Azure instance and executives are demanding insight and visibility into cloud spend.

Common Cloud Optimization Barriers

Lack of Azure experience

Misuse or misunderstanding of tools

Minimal investment

Poor cloud adoption strategy

Low governance prioritization

The **Cloud Optimization Accelerator** helps overcome these barriers by quickly deploying a foundational platform of visibility, insight, control and optimization without the need for extended organizational due diligence. By leveraging tools and analysis, the platform will solve immediate business challenges while creating a solution that can scale with alongside cloud platform maturity.

AZURE OPTIMIZATION ACCELERATOR OFFER

Traditional optimization efforts take significant investments of time and money and can often stifle progress of key cloud adoption initiatives. The Azure Optimization Accelerator offer provides immediate impact through a foundational governance platform across key Azure technologies. By implementing a landing zone based on Microsoft best-practices and tooling analysis, we will accelerate the optimization process while creating a scalable platform ready for continued growth and evolution.

KEY AREAS ADDRESSED

- Cloud Governance
- Rightsizing + Optimization
- Visibility + Analytics
- Blueprints + Automation

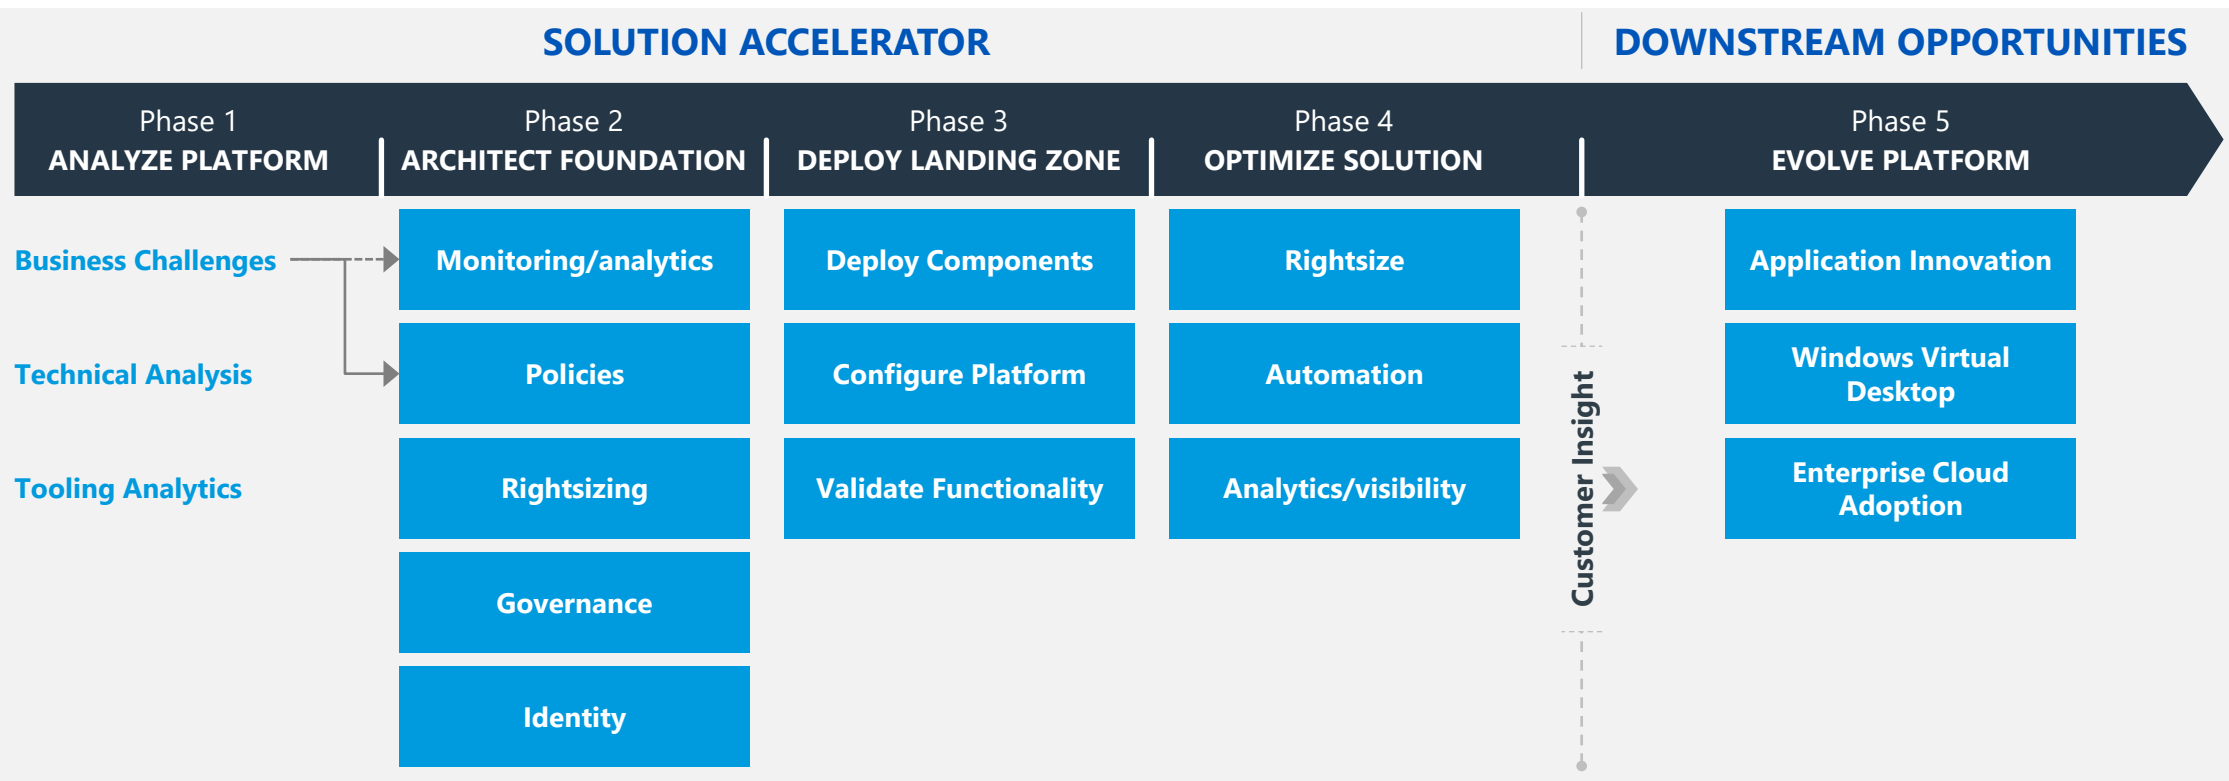

SOLUTION BENEFITS

- Direct ROI
- Quick Execution
- Analysis Driven
- Increased Visibility
- Downstream Momentum
- Repeatable

OUR APPROACH

The Optimization Accelerator packages up core governance fundamentals and deploys foundational frameworks for key platforms. By using this approach, we can achieve immediate results while building a strategy for long-term operational stability and insight.

OPTIMIZATION PLAN

	Phase 1 ANALYZE PLATFORM	Phase 2 ARCHITECT FOUNDATION	Phase 3 DEPLOY LANDING ZONE	Phase 4 OPTIMIZE SOLUTION	Phase 5 EVOLVE PLATFORM
ACTIVITIES	<ul style="list-style-type: none"> Review all client provided materials prior to workshop Execution architecture workshop Define business use case(s) Execute analysis with chosen toolset 	<ul style="list-style-type: none"> Document architecture across key platforms Validate right-sizing approach and recommendations 	<ul style="list-style-type: none"> Deploy and configure cloud platform components based on technical architecture Configure policies, identity and governance configurations 	<ul style="list-style-type: none"> Execute foundational right-sizing based on technical analysis Deploy automation and modern infrastructure components Validate optimization through analytics insight 	<ul style="list-style-type: none"> Detail larger optimization strategy Identify application modernization candidates Define next-steps and roadmap
DELIVERABLES	<ul style="list-style-type: none"> Documented business challenges and requirements Preliminary optimization analysis 	<ul style="list-style-type: none"> Technical requirements documented Platform architectures documented 	<ul style="list-style-type: none"> Deployed optimized Azure landing zone Configured Azure policies, tags, and other governance platforms 	<ul style="list-style-type: none"> Foundational understanding of right size ROI Preliminary automation and scaling Executive insight and analytics 	<ul style="list-style-type: none"> Defined next steps Defined list of modernization opportunities

INVESTMENT

ANALYSIS ONLY

Estimated Project Duration:

2 weeks

Estimated Cost:

\$15,000

FULL SOLUTION

Estimated Project Duration:

8 weeks

Estimated Cost:

\$50,000
