TEAMS CENTER

Balance between *strict rules & flexibility* in **Microsoft 365.**

REASONS TO CHOOSE

- Automates governance, security & compliance

- Automates management of external users

- Provisioning templates for Microsoft Teams & SharePoint

- Enables a clean information architecture for the discoverability of documents

- Keeps Microsoft Teams and SharePoint in sync workspaces through template versioning and bulk updates

- Reduces the internal IT costs and supports user adoption

FEATURES

- **Security & Compliance:** Provisions sensitivity labels and retention labels. Manages external sharing and external users. No one is a site collection administrator.

- **Governance:** Flexibe adaptable approval processes and customizable template permissions for users to see only the templates they have access to.

- **Provisioning:** Provisions SharePoint Site Collection of Teams Workspace for better information architecture. Elegant template creation without cloning the Teams rooms.

- **Lifecycle Management:** Identification of unused Teams Rooms & SharePoint Site Collections. Automatically removes external users through expiration dates.

- **Automated Tagging of Documents & Search Capabilities:** AI based tagging of documents with metadata entered during the application process and SharePoint Syntex support.

- **UI & Architecture:** Triggering business processes based on metadata. Individually configurable metadata can be entered during workspace creation.
