Optimise employee scheduling

Making rostering easier by automating your workforce allocation

- ✓ Maximise output from your workforce
- ✓ Remove complexity from scheduling
- ✓ The right person with the right skills at the right time.

Overlay

For organization with large diverse workforces the effort to manage employee allocations and assign staff and contractors to rostered work patterns and shifts can be onerous and error prone. PowerRoster is an intuitive cloud-based solution that empowers your team to forecast employee demand, schedule and assign the right person with the right skills accurately and efficiently for any job, any day, any time.

On Call Roster

PowerRoster	My Roster — Sam Smith

PowerRoster extends Microsoft D365 to optimise workforce scheduling

What you'll get

- Automated forecasting, planning and allocation
- Data driven intelligence
- Greater staff satisfaction
- Increased workforce outputs
- Longer term, more stable rosters

Eliminate Manual Processes

- ✓ Automated scheduling engine
- ✓ Automated demand forecasting
- ✓ Automated handling of sickness and leave

Reduce error and maximise efficiencies

Improved Experiences

- ✓ Schedule with confidence and decrease last minute shift swaps
- ✓ Build rosters in minutes, not hours and days
- ✓ Never be short staffed

Rostering that's seamless instead of painful

Competitive Advantage

- ✓ Adapt quickly and automate the new shift patterns
- ✓ Respond to demand spikes/troughs in seconds
- ✓ Happier workforce

Efficiency that eliminates the competition

Dynamics 365

We moved from using a combination of spreadsheets for rostering to using PowerRoster. It has changed our world. It used to take days to build the roster and a week to finalise. We can now do it in a couple of hours with everyone involved collaborating. The resourcing teams love the experience and the workforce love not being re-scheduled at the last minute.

For schedulers

- ✓ Demand is forecast in real-time and can leverage AI
- ✓ All workforce members have attributes that can be assigned to jobs
- ✓ Allocation is automatic and when you want to edit, it's a simple drag and drop

For team managers

- ✓ Gain full transparency of demand and your teams allocation
- ✓ Leave and sickness is handled automatically
- ✓ Full transparency of who's on what and future work

For technology teams

- ✓ PowerRoster is an extension of D365 Universal Resource Scheduling
- ✓ Cloud based to make it secure, robust and scalable
- ✓ Leveraging your existing D365 investments

Dynamics 365

PowerRoster extends the unified resource scheduling capability of the Dynamics 365 suite to provide organizations with large diverse workforces the ability to manage resource allocations and assign staff and contractors to rostered work patterns in an efficient and accurate manner. PowerRoster is an intuitive cloud-based solution that empowers your team to forecast employee resource demand, schedule and assign the right person with the right skills accurately and efficiently for any job, any day, any time.
