

Enable a Modern Digital Workspace

by delivering apps and desktops to any device.

Get a quick start, greenfield deployment to modernising your environment by creating a more mobile and productive workforce through Azure Virtual Desktop (AVD).

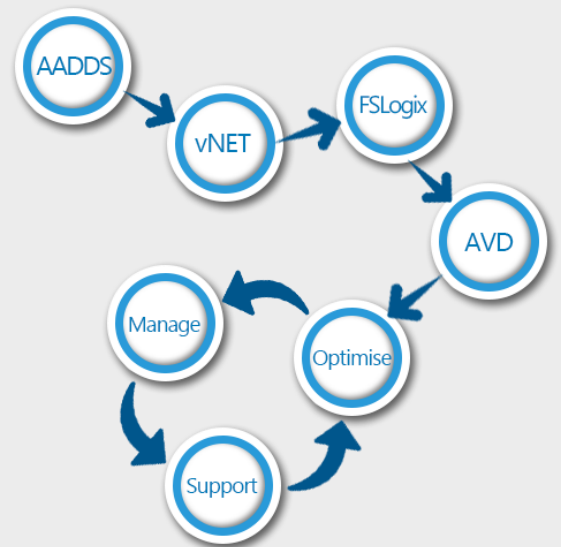

ENGAGEMENT ROAD MAP

Our Azure team delivers a two-day, remote, quick start deployment that utilises in-house tools and a trusted delivery process that follows Microsoft best practices.

ENGAGEMENT DELIVERABLES

During this session we will implement a working AVD solution that includes a new Azure Active Directory Domain Services, the required VNet configuration followed by an Azure share to host FSLogix profiles. We will then create the AVD deployment with a Workspace and a host pool with the desired virtual machines. Finally, we will customize the setup with an optimised Windows 10 image which is ready for use with Microsoft 365 and Teams, that scales automatically to your user requirements.

NEXT STEPS

Contact us today to learn more about our offering and our ProActive Managed Services that enables customers to free up their IT teams to focus on their core business needs.
