# Understanding tomorrow's workplace

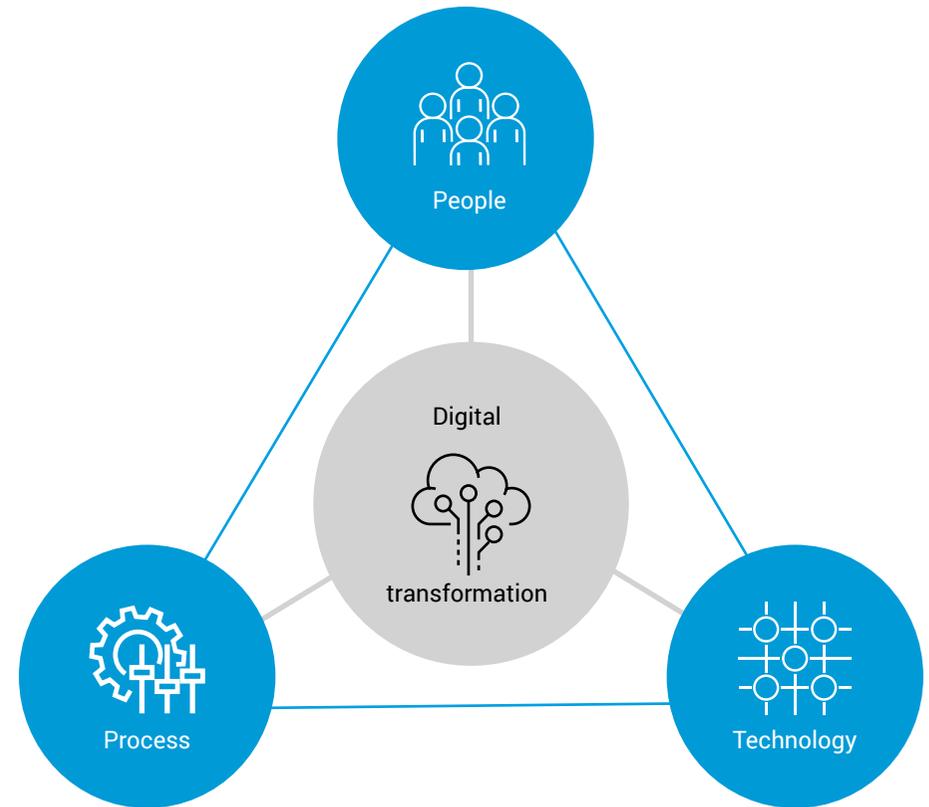

Empowering employees through a modern workplace will transform the organisations of tomorrow. Personalized, decentralized – yet connected. Workplaces where employees are continuously learning, collaborating in teams, working securely across any device, and contributing creatively with their best work. Modern workplaces are flexible, employee-centric, that drive innovation with agility, using transparent information that employees can access securely anytime, from anywhere.

Such an environment helps companies attract and retain talent, increase productivity and employee satisfaction, decrease employee attrition, and enhance innovation agility while minimizing spend.

# Begin at the beginning

*Starting the journey to a modern workplace requires connecting the organisation's people, processes, and technology, with the goal of fostering more seamless interactions and alignment around everyone contributing to the same mission.*

# #1. Hybrid Platform

Transform your workplace with a modern platform.

Transforming the workplace experience requires a holistic strategy that combines technology, operations, culture, and employee experience. But many organisations struggle to know where to begin and how to unlock the value inside their workplaces.

A key to getting started is a cost-efficient, responsive, and secure evergreen workplace platform, which provides improved mobility, productivity, collaboration, and security. We can help you redefine your workplace as a creator of sustainable value.

## [A new approach to old challenges](#)

Our end-to-end approach to workplace transformation provides you with a platform that puts your business on a

trajectory for sustained growth. Our workplace modernisation approach includes:

- *Implementing Microsoft 365, which includes Office 365, Windows 10 and Enterprise Mobility and Security*
- *Create seamless experiences - Optimize workplace technologies and physical environments to increase productivity and collaboration*
- *Minimise security exposure - Secure your workplace, ensure compliance, and maintain customer trust*
- *Optimize for an evergreen cycle - Manage risks and exploit opportunities associated with frequent updates*
- *Consume Workplace as a Service - Continuously improve employee experience and operations*

## #2. Remote Working

Rapidly enable remote working at scale.

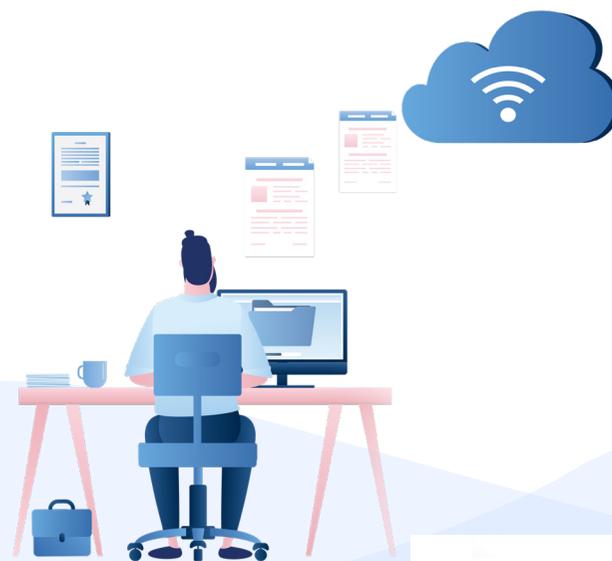

COVID-19 affected employees and workplaces differently as it spread across the globe. But the one universal impact was the urgent remote working agenda forced upon virtually every organisation. Nowadays, organisations are looking to rapidly enable remote working at scale, in a secure and sustainable way.

Through our experience, clients often need immediate help in 3 common areas. Veracloud has developed different rapid deployment programs to help with:

- *Microsoft Teams - Enablement of Teams, security, and collaboration capabilities.*

- *Azure Virtual Desktop - Deployment of features like Exchange, Microsoft Office, and File sharing.*
- *Security - Deployment of Microsoft and Partner Security solutions that enable an effective response for security incidents and risks.*

Our programs create a highly extensible environment that allows organizations to quickly scale and adapt to changing business needs.

## #3. Workplace Experience

Treat your people like they're customers.

Tackling these business priorities demands technology, HR and line of business leaders embrace a holistic workplace approach and partner cohesively. And that's precisely what our Workplace Experience framework can help you achieve.

Our Experience embraces the entire workplace to drive sustainable value – which matters more than ever right now. By combining technology, operations, culture, and employee experience, you can unlock cost efficiency, empower a more effective recovery, and ultimately drive growth.

### Stop surviving, start thriving:

- *Provide insights to encourage personal wellbeing and build organisational resilience in the apps people use every day.*
- *An integrated experience between SharePoint, Teams and Viva to enhance employee experience and collaboration*
- *Tools to enhance business to co-innovate and consolidate*

## #4. Business Automation

Power up your process automation with Low-code technologies.

Low-code technologies offer the promise of effective “citizen development”, where business users can produce apps and virtual agents at speed with little to no IT intervention. With Microsoft’s Power Platform, Veracloud combines the strengths of key products - Power BI, Power Apps, Power Automate, and Power Virtual Agents – to serve this business need.

In theory, low-code platforms can empower employees to accelerate business while reducing the workload on IT. In practice, it takes some special expertise and adaptive governance to turn low-code momentum into an intelligent,

secure, and repeatable advantage that helps your business evolve and compete. Like many other organisations seeking to democratise data with a modern workplace experience, we can help you:

- *Turn data access into business agility.*
- *Empower the business with self-service innovation.*
- *Provide sensible guard rails that support innovation.*
